Dear readers,

you are obtaining the jubilee – 10th annual volume of the Statistical Yearbook of the Slovak Republic. Likewise the previous editions this publication brings the view on demographic, economic and social development in the Slovak Republic by statistical data form and compares basic data with abroad.

In comparison with previous editions the methodological parts of individual subchapters are essentially revised. Redrafted methodological inputs contain methodological notes as well as definitions of the most important indicators, data sources and notes which statistical publications can provide more information on given theme.

The most important changes were done in the subchapter of quarterly and annual national accounts in connection with implementation of ESA 95 methodology.

In the branch of industry the monitoring of production of goods finished and instead of this indicator the value of receipts (receipts from industrial activities and from exports in total) is published. For the first time, the index of industrial production is included in the yearbook. The index is calculated on the basis of the change of selected products volume by methodology of the European Union. The basic year is 1998. The number of published financial indicators for industry is wider.

The subchapter forestry includes some new indicators as well as information calculated for the whole complex of units.

For the fixed assets branch the results of one-shot surveying of age structure of fixed assets realized after eleven years are included.

Information on finance, foreign trade and net money income of households were partially updated.

The Statistical Yearbook of the Slovak Republic 2000 is the work result of the staff of the Statistical Office of the SR, some Ministries and other organizations to whom belong thanks

for their performance. Thanks belong to the publishing house VEDA for issuing and distribution of this publication.

Distribution of the Statistical Yearbook of the Slovak Republic 2000 and CD-ROM, which is a part of the book publication, is provided by VEDA, publishing house of SAV, Bradáčova 7, 852 86 Bratislava 5, tel./fax ++4217/63 83 11 72.

Dear readers, we wish this publication serves to you the best so we expect your further comments which could be sent to the following address: Statistical Office of the Slovak Republic, Miletičova 3, 824 67 Bratislava 26.

Peter Mach
President Statistical Office
of the Slovak Republic

Bratislava, October 2000

The publication was elaborated by a team of authors included among the staff of the Statistical Office of the Slovak Republic under leadership of the Editorial Board:

Mach Peter, chairman of the Editorial Board
Baláž Pavol
Blahová Eva
Holičková Edita
Králiková Agnesa
Lieskovský Ivan
Olexa Milan
Pflügler Alexander
Schill Štefan
Schwartzová Mária
Škultéty Ivan
Valachovič Štefan

Notice

Unless otherwise specified in the text heading or a legend to the table, region the data refer to (country, district etc.) is the territory of the Slovak Republic.

Unless otherwise specified in the table heading or a legend to the table, size of published data file, the data refer to the economy of the SR in total including imputation for the organizations up to 19 employees, tradesmen or population.

Time series of data in terms of crowns is marked with a measuring unit SKK, except data until 1992 is in terms of CSK. No exchange rate conversions were made.

As far as data by certain classifications are concerned (e.g. Branch Classification of Economic Activities, International Standard Classification of Commodities, etc.), the English text of indicators not always corresponds to a literal translation of the Slovak text but is given according to the diction of the foreign classifications or is given in the abbreviated form.

Names of countries are given in abbreviations, that are not always in compliance with official full names of the countries.

Differences in sums and ratios result from rounding data off. Unless stated otherwise explicitly, published data are definitive.

Explanations to symbols:

Macron (–)	in the place of a number denotes that the phenomenon did not occur
Zero (0,0 0,00)	denotes the magnitude more than zero but less than the least unit expressible in the table
Dot (•)	in the place of a number denotes that the figure is not available or reliable
Cross (x)	means that the entry is not possible for logical reasons
Capital I (I)	means that it is not possible to publish the figure because of its individual character
Break symbol (⸗)	means that the comparability of data series is cut off due to methodology or another reason

I. Slovakia from 1960 – 1999

II.1 National accounts

II.2 Finance

II.3 Prices

II.1 National accounts

II.1–1. Gross domestic product
II.1–2. Selected macroeconomic indicators in 1996
II.1–3. Selected macroeconomic indicators in 1997
II.1–4. Selected macroeconomic indicators in 1998
II.1–5. Selected macroeconomic indicators in 1999
II.1–6. Gross domestic product by economic activities in 1996 and 1997
II.1–7. Gross domestic product by economic activities in 1998 and 1999
II.1–8. Selected macroeconomic indicators – deflators
II.1–9. Value added by size structure of enterprises
II.1–10. Gross output by size structure of enterprises
II.1–11. Goods and services account
II.1–12. Sector accounts of the SR in 1996
II.1–13. Sector accounts of the SR in 1997 and 1998
II.1–14. Selected indicators of supply and use tables by commodities in 1996
II.1–15. Selected indicators of supply and use tables by commodities in 1998
II.1–16. Selected indicators of supply and use tables by industries in 1996
II.1–17. Selected indicators of supply and use tables by industries in 1998
II.1–18. Distribution and use of income in sector of households

II.2 Finance

II.2–1. Revenues and expenditures of public budgets
II.2–2. Revenues and expenditures of local budgets
II.2–3. Structure of revenues and expenditures of the state budget by type
II.2–4. Structure of revenues and expenditures of the state budget by flows
II.2–5. Balance of revenues and expenditures of the state budget
II.2–6. Development of public debt as of Dec. 31
II.2–7. Revenues and expenditures of state funds
II.2–8. Revenues and expenditures of the health insurance companies
II.2–9. The insured under the health insurance companies as of Dec. 31
II.2–10. Revenues and expenditures of the Social Insurance Company
II.2–11. The insured under the Social Insurance Company as of Dec. 31
II.2–12. Revenues and expenditures of the National Labour Office
II.2–13. Payers to the National Labour Office as of Dec. 31
II.2–14. Financial indicators in non-financial organizations in selected branches in 1999
II.2–15. Selected indicators on non-financial organizations by size structure of enterprises in 1999
II.2–16. Selected financial indicators of non-financial organizations with 20 and more employees
II.2–17. Assets and liabilities of the National Bank of Slovakia as of Dec. 31
II.2–18. Assets and liabilities of commercial banks as of Dec. 31

II.2–19. Monetary survey in actual exchange rate
II.2–20. Balance of payments of the Slovak Republic
II.2–21. Detailed capital account of balance of payments of the Slovak Republic
II.2–22. Average interest rates of interbank credits
II.2–23. Average interest rates of deposits and credits by sectors in 1999
II.2–24. Summary of credits and deposits as of Dec. 31
II.2–25. Summary of population deposits as of Dec. 31
II.2–26. Average foreign exchange rates (midpoint)
II.2–27. Foreign exchange position of the bank sector towards abroad as of Dec. 31
II.2–28. Banking sector
II.2–29. Capital market
II.2–30. Foreign direct investments into the Slovak Republic as of Dec. 31
II.2–31. Foreign direct investments into the Slovak Republic by country of investor and by selected economic activities as of Dec. 31
II.2–32. Direct investments of the Slovak Republic abroad by country as of Dec. 31
II.2–33. Direct investments of the Slovak Republic abroad by country and selected economic activities as of Dec. 31
II.2–34. Financial indicators on investment companies and funds
II.2–35. Assets and liabilities of investment companies and funds as of Dec. 31
II.2–36. Insurance companies in the insurance market
II.2–37. Premium fixed by the law
II.2–38. Settled claims

II.3 Prices

II.3–1. Development of price indices (annual averages)
II.3–2. Industrial producers price indices in selected branches CPA
II.3–3. Industrial producers price indices by the Classification of Products by Activities (CPA)
II.3–4. Average prices of agricultural products
II.3–5. Price index of agricultural products
II.3–6. Consumer price indices
II.3–7. Cost of living indices of employees
II.3–8. Cost of living indices of pensioners
II.3–9. Average consumer prices of selected products

III.1 Territory and Climate

III.2 Population

III.3 Labour Market

III.4 Fixed Assets

III.5 Research and Development

III.6 Organizational Structure of the Economy

III.1 Territory and Climate

III.1–1. Area and borders of the Slovak Republic in 1999
III.1–2. Location of the Slovak Republic's territory
III.1–3. Maximum distances on the area of the Slovak Republic
III.1–4. Meteorological data from selected monitoring stations
III.1–5. Hydrological data
III.1–6. Main rivers in the Slovak Republic, their basins and length of bordering water courses
III.1–7. Mountain

III.2 Population

III.2–1. Population
III.2–2. Population by basic age groups (as of Dec. 31)
III.2–3. Population by sex (as of Dec. 31)
III.2–4. Population by nationality
III.2–5. Population by marital status (as of Dec. 31)
III.2–6. Population by age (as of Dec. 31)
III.2–7. Natural movement of population
III.2–8. Marriages by age of engaged couples in 1999
III.2–9. Marriages by education of engaged couples in 1999
III.2–10. Divorces by education of couples in 1999
III.2–11. Live-births by age of mother
III.2–12. Marital live-births by birth order and non-marital live-births
III.2–13. Live-births by month of birth
III.2–14. Fertility of women by age
III.2–15. Deaths by month of death
III.2–16. Reported abortions by age of women
III.2–17. Deaths by age and sex
III.2–18. Deaths by causes
III.2–19. Internal migration of population by types
III.2–20. International migration in 1999

III.3 Labour Market

III.3–1. Economic activity of the population (from labour force survey)
III.3–2. Employed by age and education (from labour force survey)
III.3–3. Employed by Classification of Occupation – ISCO-88 (from labour force survey)
III.3–4. Employed by economic activity – NACE (from labour force survey)
III.3–5. Employed by sector, status in employment and permanency of the job (from labour force survey)
III.3–6. Employees and tradesmen in the economy of the SR (average registered number)
III.3–7. Average gross monthly wages of employees in the economy of the SR calculated per persons
III.3–8. Number of employees and average wage in the economy of the SR by size of enterprises
III.3–9. Average hourly wages of employees in the economy of the SR for the enterprises with 20 and more employees (calculated per person)
III.3–10. Structure of average gross wages of employees in the economy of the SR for 1998 (from results of sample survey on wages)
III.3–11. Structure of monthly labour costs per employee in the SR in 1998 (from total labour costs survey)
III.3–12. Hourly labour costs in the SR (from total labour costs survey)
III.3–13. Applicants for a job registered in labour offices in the SR (as of Dec. 31)
III.3–14. Unemployed by labour force survey

III.4 Fixed Assets

III.4–1. Procured investments by economic activities
III.4–2. Procured tangible investments by economic activities
III.4–3. Constructional part of procured investments by economic activities
III.4–4. Machinery part of procured investments by economic activities
III.4–5. Procured intangible investments by economic activities
III.4–6. Procured investments by ownership and by sectors of the national accounts
III.4–7. Procured investments by size structure of enterprises in 1999
III.4–8. Completed dwellings
III.4–9. Net fixed assets stock as of Dec. 31
III.4–10. Status and movement of gross fixed assets stock in 1998
III.4–11. Gross tangible fixed assets stock as of Dec. 31, 1998 in organizations with 20 and more employees by groups
III.4–12. Gross intangible fixed assets stock as of Dec. 31, 1998 in organizations with 20 and more employees by groups
III.4–13. Gross fixed assets stock at the beginning of year and increases in 1998 in organizations with 20 and more employees by use in economic activities (NACE)
III.4–14. Gross fixed assets at the end of year and decreases in 1998 in organizations with 20 and more employees by use in economic activities (NACE)
III.4–15. Gross fixed assets stock in 1998 in organizations with 20 and more employees by entrepreneurial and non-entrepreneurial entities

III.4–16. Gross fixed assets stock in 1998 in organizations with 20 and more employees by sectors of the national accounts
III.4–17. Gross fixed assets stock in 1998 in organizations with 20 and more employees by ownership
III.4–18. Fixed assets consumption as of Dec. 31 by sectors of the national account and by groups
III.4–19. Fixed assets as of Dec. 31, 1998 in organizations with 20 and more employees by size structure of enterprises
III.4–20. Age structure of fixed assets in the Slovak Republic as of Dec. 31, 1998 in organizations with 20 and more employees

III.5 Research and Development

III.5–1. Employees in research and development (R&D)
III.5–2. Employees in independent and associated institutions of research and development
III.5–3. Structure of activities of research and development institutions by current expenditures
III.5–4. Expenditures on research and development
III.5–5. Licences
III.5–6. Applications concerning industrial legal protection
III.5–7. Granted and registered kinds concerning industrial legal protection.
III.5–8. Applications concerning inventions according to the international patent classification
III.5–9. Foreign applications concerning inventions according to the international patent classification
III.5–10. Granted patents according to the international patent classification
III.5–11. Applications concerning trademarks
III.5–12. Registered trademarks
III.5–13. Certificated products and certificated quality management systems

III.6 Organizational Structure of the Economy

III.6–1. Legal entities by economic activities and selected legal forms as of Dec. 31, 1999
III.6–2. Natural persons by economic activities and selected legal forms as of Dec. 31, 1999
III.6–3. Profit organizations by economic activities and selected forms of ownership as of Dec. 31, 1999
III.6–4. Profit organizations by economic activities and staff categories as of Dec. 31, 1999
III.6–5. Profit organizations by selected forms of ownership and staff categories as of Dec. 31, 1999
III.6–6. Structure of profit organizations by year of foundation
III.6–7. Structure of profit organizations by year of extinction
III.6–8. Structure of registered natural persons by year of foundation
III.6–9. Structure of registered natural persons by year of extinction

IV.1 State and Protection of the Environment

IV.2 Air Quality

IV.3 Water

IV.1 State and Protection of the Environment

IV.1–1. Protected territories
IV.1–2. National parks and protected landscape areas as of Dec. 31,1998
IV.1–3. Penalties
IV.1–4. Structure of stand area as of Dec. 31
IV.1–5. Tree species area and their age structure as of Dec. 31,1999
IV.1–6. Damage to forests caused by immisions as of Dec. 31, 1999
IV.1–7. Degree of damage to forests by tree species as of Dec. 31, 1999
IV.1–8. Damage to forests caused by abiotic and biotic factors as of Dec. 31, 1999
IV.1–9. Data on hunting grounds as of Dec. 31
IV.1–10. Hunting and spring stock of game as of March 31
IV.1–11. Xenobiotics in foodstuffs
IV.1–12. Municipal waste
IV.1–13. Waste

IV.2 Air Quality

IV.2–1. Emissions of major pollutants by economic activity – particulates
IV.2–2. Emissions in burdened regions by selected pollution sources in 1999
IV.2–3. Immissions in selected localities in 1999
IV.2–4. Regional air pollution in 1999
IV.2–5. Levels of surface ozone in selected monitoring stations
IV.2–6. Regional pollution of precipitation in 1999

IV.3 Water

IV.3–1. Water courses and waterworks under the administration of water management organizations
IV.3–2. Public water-supply and sewage systems
IV.3–3. Waste water discharged into water courses in 1999
IV.3–4. Generation of waste water in 1999
IV.3–5. Water quality in water courses by river-basins in 1999
IV.3–6. Water quality in significant water courses in 1999 – quality categories
IV.3–7. Water quality in the mouths of significant water courses in 1999

V. 3 Industry

V. 4 Energy

V. 5 Construction

V. 6 Transport, Post and Telecommunications

V. 7 Internal Trade

V. 8 Foreign Trade

V. 9 Selected Market Services

V.10 Tourism

V. 1 Agriculture

V.1–1. Area of land as of Dec. 31
V.1–2. Gross agricultural production in enterprises with 20 and more employees
V.1–3. Sown area as of May 20
V.1–4. Production of agricultural crops
V.1–5. Hectare yields
V.1–6. Selected sorts of vegetables
V.1–7. Selected sorts of fruit
V.1–8. Area of vineyards and grape crops as of Dec. 31
V.1–9. Age and sort composition of vineyards as of Dec. 31
V.1–10. Roofed area
V.1–11. Balance of grains
V.1–12. Livestock as of Dec. 31
V.1–13. Livestock production
V.1–14. Livestock yields
V.1–15. Catches in inland waters
V.1–16. Apiculture
V.1–17. Sales of agricultural products by primary producers
V.1–18. Level of agricultural production
V.1–19. Means of mechanization as of Dec. 31
V.1–20. Consumption of fertilizers
V.1–21. Consumption of pesticides
V.1–22. Employees permanently involved in agricultural enterprises with 20 and more employees

V. 2 Forestry

V.2–1. Forest land
V.2–2. Afforestation and silviculture
V.2–3. Logging and timber deliveries
V.2–4. Number and size of organizations managing forest

V. 3 Industry

V.3–1. Basic indicators of industry
V.3–2. Selected indicators on industry by size structure of enterprises
V.3–3. Receipts of enterprises with 20 and more employees in total
V.3–4. Receipts from sales for export of enterprises with 20 and more employees
V.3–5. Receipts from industrial activity and industrial production index of enterprises with 20 and more employees
V.3–6. Profit, loss of enterprises with 20 and more employees
V.3–7. Valued added of enterprises with 20 and more employees
V.3–8. Expenses of enterprises with 20 and more employees
V.3–9. Revenues of enterprises with 20 and more employees
V.3–10. Number of enterprises with 20 and more employees
V.3–11 Monthly labour productivity based on receipts from industrial activity of enterprises with 20 and more employees
V.3–12 Average registered number of employees of enterprises with 20 and more employees
V.3–13. Average monthly wage of employee in enterprises with 20 and more employees
V.3–14. Selected indicators on industry by ownership
V.3–15. Production of selected industrial commodities
V.3–16. Utilization of working hours fund per manual worker

V. 4 Energy

V.4–1. Primary energy sources and final consumption of fuels and energy
V.4–2. Primary energy sources and final consumption of solid fuels
V.4–3. Primary energy sources and final consumption of liquid fuels
V.4–4. Primary energy sources and final consumption of gaseous fuels
V.4–5. Primary energy sources and final consumption of electricity
V.4–6. Specific electricity consumption for product manufacture
V.4–7. Specific heat consumption for product manufacture
V.4–8. Specific fuel consumption for product manufacture
V.4–9. Sources and use of fuels and energy
V.4–10. Sources and use of electricity
V.4–11. Consumption of selected fuels in agriculture
V.4–12. Consumption of selected fuels and energy in industry
V.4–13. Consumption of selected fuels and energy in construction

V. 5 Construction

V.5–1. Construction enterprises classified by number of employees
V.5–2. Selected indicators on construction by size structure of enterprises
V.5–3. Construction production – aggregate data
V.5–4. Construction production carried out by own employees by months
V.5–5. Basic indicators in construction enterprises with 20 and more employees
V.5–6. Basic indicators in construction enterprises with 20 and more employees by months in 1999
V.5–7. Average registered number of employees by ownership sector in construction enterprises with 20 and more employees
V.5–8. Completed dwellings in new buildings built by supplier enterprises with 20 and more employees – by construction technology
V.5–9. Consumption of selected products in construction enterprises with 20 and more employees
V.5–10. Contractually agreed construction production in new construction by classification of constructions types (JKSO) in enterprises with 20 and more employees
V.5–11. Building machinery operated by construction companies with 20 and more employees

V. 6 Transport, Post and Telecommunications

V.6–1. Basic data on transport network
V.6–2. Motor vehicles as of Dec. 31
V.6–3. Average registered number of employees
V.6–4. Railway transport
V.6–5. Railway goods traffic by commodity groups
V.6–6. Road public and non-public transport
V.6–7. Selected indicators in road public traffic by size structure of enterprises
V.6–8. Road public goods traffic by commodity groups
V.6–9. Water transport
V.6–10. Shipping by commodity groups
V.6–11. City transport
V.6–12. Air transport
V.6–13. Pipeline transport
V.6–14. Post office
V.6–15. Telecommunications

V. 7 Internal Trade

V.7–1. Structure of receipts for retail activity
V.7–2. Receipts in retail trade by ownership
V.7–3. Receipts in retail trade by economic activities
V.7–4. Selected indicators in internal trade by size structure of enterprises
V.7–5. Receipts in wholesale by economic activities
V.7–6. Network of outlet centres of catering with 20 and more employees as of December 31, 1999
V.7–7. Retail network in organizations with 20 and more employees as of December 31, 1999

V. 8 Foreign Trade

V.8–1. Territorial structure of foreign trade
V.8–2. Foreign trade by commodity groups (Standard International Trade Classification Revision 3)
V.8–3. Imports, exports and trade balance by selected countries
V.8–4. Foreign trade by chapters of classification of goods in Customs Tariff
V.8–5. Import of selected commodities by the most important partners
V.8–6. Export of selected commodities by the most important partners

V. 9 Selected Market Services

V.9–1. Basic indicators on selected market services
V.9–2. Selected indicators on selected market services by size structure of enterprises
V.9–3. Receipts for selected market services

V.10 Tourism

V.10–1. Capacity and performances of accommodation facilities
V.10–2. Capacity and performances of accommodation facilities in selected towns in 1999
V.10–3. Foreign visitors in accommodation facilities of tourism
V.10–4. Active tourism organized by travel agencies in the SR
V.10–5. Passive tourism organized by travel agencies in the SR
V.10–6. Foreign tourism by sections of borders
V.10–7. Number of entries of foreign visitors by the visa requirement

VI.1 Income, Expenditure and Consumption of Households

VI.2 Education

VI.3 Health

VI.4 Social Security

VI.5 Culture and Religion

VI.6 Physical Culture

VI.1 Income, Expenditure and Consumption of Households

VI.1–1. Structure of gross money incomes and expenditure of households by social groups – household budget surveys
VI.1–2. Structure of net money income and expenditure of households by social groups – household budget surveys
VI.1–3. Consumption of selected kinds of foodstuffs and alcoholic beverages (per capita/year)
VI.1–4. Daily consumption of energy and the most important nutritive substances per capita

VI.2 Education

VI.2–1. Kindergartens and primary schools
VI.2–2. Grammar schools (secondary general education)
VI.2–3. Secondary vocational schools
VI.2–4. Secondary vocational schools by type of schools (separate part-time schools ncluded)
VI.2–5. Secondary vocational schools – students and school-leavers by groups of options (full time study)
VI.2–6. Secondary vocational apprentice training centres
VI.2–7. Special schools
VI.2–8. Institutions of higher education
VI.2–9. Institutions of higher education by subject groups – students of Slovak nationality
VI.2–10. Institutions of higher education by subjects of studies
VI.2–11. Institutions of higher education – foreign students by nationality
VI.2–12. Institutions of higher education in school year 1999/2000
VI.2–13. Schools by type and teaching language
VI.2–14. Primary schools of arts
VI.2–15. Providing meals at schools
VI.2–16. Scholarships
VI.2–17. After school establishments
VI.2–18. Church schools
VI.2–19. Private schools
VI.2–20. Revenues and expenditures in church schools
VI.2–21. Revenues and expenditures in private schools
VI.2–22. Expenditures on education from the state budget and municipal budgets

VI.3 Health

VI.3–1. Physicians posts, beds in health establishments, physicians
VI.3–2. Facilities of pharmaceutical services
VI.3–3. Consumption of drugs by categories as of Dec. 31
VI.3–4. Consumption of drugs by producer countries as of Dec. 31
VI.3–5. Consumption of drugs by selected producers as of Dec. 31
VI.3–6. Expenditures in public health sphere
VI.3–7. Balneological institutions
VI.3–8. Selected infectious diseases compulsory notified
VI.3–9. Bed fund in hospitals (including maternity hospitals) by wards
VI.3–10. Examined patients and days of stay in selected state health establishment
VI.3–11. Terminated cases of disability to work
VI.3–12. Disability to work due to disease and injury

VI.4 Social Security

VI.4–1. Persons under sickness insurance
VI.4–2. Systematic sickness insurance benefits
VI.4–3. Systematic sickness insurance benefits by kind
VI.4–4. State social benefits and sickness insurance and pensions security benefits refunded by government by kind
VI.4–5. Pensions security benefits
VI.4–6. Number of pensions paid, average pensions and pensions security benefits paid
VI.4–7. Average monthly level of pensions paid
VI.4–8. Number of pensions receivers
VI.4–9. Non-investment expenditures on social care
VI.4–10. Nursing service
VI.4–11. Social care institutions as of Dec. 31

VI.5 Culture and Religion

VI.5–1. Theatres
VI.5–2. Musical ensembles
VI.5–3. Audio-visual works
VI.5–4. Radio broadcasting
VI.5–5. Television broadcasting
VI.5–6. Public libraries, scientific libraries, university libraries
VI.5–7. Periodical press
VI.5–8. Journals by periodicity of issue
VI.5–9. Newspapers by periodicity of issue
VI.5–10. Activities of individual cultural establishments (museums, galleries, observatories, ZOOs)
VI.5–11. Population by religion by the housing and population census as of March 3, 1991
VI.5–12. Selected indicators on churches
VI.5–13. Selected indicators on Roman-Catholic Church
VI.5–14. Membership in civil associations

VI.6 Physical Culture

VI.6–1. Selected indicators on physical culture
VI.6–2. Sports schools
VI.6–3. Sports classes
VI.6–4. Associations and membership of the Association of Technical and Sporting Activities SR and Slovak National Motor-car Club
VI.6–5. Metals won by the Slovak sportsmen (adults)
VI.6–6. Metals won by the Slovak sportsmen (I. age category after adults)

VII.1 Crime-rate and Justice

VII.2 Accidents and Fires

VII.1 Crime-rate and Justice

VII.1–1. Crime-rate
VII.1–2. Development of criminal offences by basic groups and kinds
VII.1–3. Cases settled by courts
VII.1–4. Results of criminal proceedings and legally passed sentences
VII.1–5. Persons convicted of selected crimes
VII.1–6. Juveniles convicted of selected crimes
VII.1–7. Civil cases
VII.1–8. Sued and convicted persons in penitentiary institutions
VII.1–9. Convicts in penitentiary institutions by reformatory and reclamation groups (as of Dec. 31)
VII.1–10. Convicts by reformatory and reclamation groups, education and sex (as of Dec. 31)
VII.1–11. Convicts by duration of custodial sentence and reformatory and reclamation groups (as of Dec. 31)
VII.1–12. Convicts by age and sex

VII.2 Accidents and Fires

VII.2–1. Road accidents
VII.2–2. Road accidents by cause
VII.2–3. Road accidents by main causes
VII.2–4. Road accidents by place of origin
VII.2–5. Fires
VII.2–6. Fires by branches of the economy
VII.2–7. Killed and injured persons in fires by observed categories

VIII.1 Regions

VIII.2 Towns

VIII.1 Regions

VIII.1–1. Components of gross domestic product
VIII.1–2. Surface area, population and population density in 1999
VIII.1–3 Population as of Dec. 31
VIII.1–4. Natural movement of population
VIII.1–5. Natural increase, decrease (–) of population
VIII.1–6. Migration of the population
VIII.1–7. Marriages and divorces
VIII.1–8. Employment by selected branches as of Dec. 31, 1999
VIII.1–9. Registered unemployment and unemployment rate as of Dec. 31, 1999
VIII.1–10. Structure of monthly labour costs per employee in 1998 (from total labour costs survey)
VIII.1–11. Emissions of basic pollutants
VIII.1–12. Specific emissions of basic pollutants
VIII.1–13. Public water-supply and sewage systems
VIII.1–14. Area of land as of Dec. 31
VIII.1–15. Production of agricultural crops
VIII.1–16. Hectare yields of agricultural crops
VIII.1–17. Livestock as of Dec. 31
VIII.1–18. Receipts from sale of farming products of primary production
VIII.1–19. Gross agriculture production from gross turnover in enterprises with 20 and more employees

VIII.1–20. Gross turnover and number of employees in industrial enterprises with 20 and more employees
VIII.1–21. Construction production and number of employees in enterprises with 20 and more employees
VIII.1–22. Road transport
VIII.1–23. Receipts in retail trade
VIII.1–24. Receipts in wholesale
VIII.1–25. Construction of dwellings in 1999
VIII.1–26. Completed dwellings by number of rooms in 1999
VIII.1–27. Kindergartens and primary schools
VIII.1–28. Grammar schools and secondary vocational schools
VIII.1–29. Beds and physicians posts in hospitals (Health service)
VIII.1–30. Beds and physicians posts in special therapeutical institutions (sector of the Ministry of Health)
VIII.1–31. Beds and physicians posts in balneological establishments (sector of the Ministry of Health)
VIII.1–32. Entrepreneurial entities – Natural persons as of Dec. 31, 1999
VIII.1–33. Profit organizations by selected legal forms as of Dec. 31, 1999
VIII.1–34. Criminality by major groups in 1999
VIII.1–35. Violent criminal offences in 1999
VIII.1–36. Road accidents in 1999
VIII.1–37. Fires in 1999

VIII.2 Towns

VIII.2–1. Natural movement of population
VIII.2–2. Population, total increase, decrease (–) of population
VIII.2–3. Geographical data
VIII.2–4. House and dwelling stock
VIII.2–5. Retail and accommodation establishments network as of Dec. 31, 1999
VIII.2–6. Water-supply and gas-supply networks and sewage system as of Dec. 31, 1999
VIII.2–7. Education in 1999
VIII.2–8. Culture as of Dec. 31, 1999

IX.1 International Surveys

IX.2 International Associations

IX.1 International Surveys

IX.1–1. Surface area, population and population density
IX.1–2. Marriages
IX.1–3. Divorces
IX.1–4. Natality
IX.1–5. Mortality
IX.1–6. Natural increase in population
IX.1–7. Infant mortality
IX.1–8. Life expectancy
IX.1–9. Economically active population
IX.1–10. Unemployment rate
IX.1–11. Gross domestic product
IX.1–12. Gross domestic product per capita
IX.1–13. Gross domestic product in purchasing power standard in 1996
IX.1–14. Housing construction
IX.1–15. Mining of coal
IX.1–16. Mining of petroleum
IX.1–17. Mining of natural gas
IX.1–18. Electricity production and installed capacity of power plants by type of plant
IX.1–19. Index numbers of industrial production
IX.1–20. Production of selected industrial commodities

IX.1–21. Agricultural output (average from 1989 – 1991 = 100)
IX.1–22. Cereals
IX.1–23. Potatoes
IX.1–24. Pulses
IX.1–25. Production of vegetables and fruit
IX.1–26. Coffee, green
IX.1–27. Tobacco leaves
IX.1–28. Cattle as of Dec. 31
IX.1–29. Pigs as of Dec. 31
IX.1–30. Meat production
IX.1–31. Structure of meat production by kind in 1998
IX.1–32. Production of milk
IX.1–33. General consumer price indices
IX.1–34. Consumer price indices of foodstuffs
IX.1–35. Imports, exports and balance by main countries
IX.1–36. Balance of payment (current account)
IX.1–37. Money (M1)
IX.1–38. International reserves (minus gold)
IX.1–39. Exchange rate of US dollar in national currency units (mid-point rates)
IX.1–40. Codes and names of countries used in international statistics (ISO 3166-93)

IX.2 International Associations

IX.2–1. CEFTA countries

Methodological notes

The analytical framework of the compilation of National Accounts published in the Chapter "Slovakia during 1960 – 1990" is based on several methodologies of the compilation of National Accounts. Data for 1989 – 1991 are recalculated by a transformation method according to the recommendations of UN SD (the Statistical Division of United Nations) from the Balance of National Economy and consequently recalculated into the ESA 79 methodology (European System of Integrated Economic Accounts rev. 1979) by means of the coefficient method. The years 1992 – 1995 were compiled according to the ESA 79 methodology. National Accounts for 1993 – 1995 were revised at the level of the main aggregates in line with the ESA 95 methodology (European System of National and Regional Accounts in the Community 1995). The definitive data for 1996 and semi-definitive data for 1997 and 1998 were compiled according to the ESA 95 methodology. Data for 1999 are to be considered as preliminary and are based on the Quarterly National Accounts.

The **Quarterly National Accounts** are compiled on the basis of the ESA 95 methodology and are after the fourth revision which has been made based on the definitive results of the National Accounts for 1996.

Differences in selected aggregates of GDP creation and GDP branch classification result from time-lag between the termination of semidefinitive annual data (August 2000) and the revision of quarterly accounts (July 2000) as well as from the reduced basis of data on quarterly level.

Since 1996, the **Annual National Accounts** have been compiled in accordance with the new methodology ESA 95 and are compatible with the national accounts of the Member and Associated Countries. For 1993 – 1995, the results of Annual National Accounts were transformed into the new methodology ESA 95 at the level of main aggregates. The methodological difference within the recalculation of main aggregates has appeared in the increase of GDP at current prices by 5.8 % for 1993 and 1994 and by 5.7 % in 1995.

National Accounts for 1996 – 1998 compiled under the ESA 95 methodology represent a compatible accounting framework for the systematic and detailed description of the total economy as well as particular sectors and sub-sectors where all stages of the economic

process are recorded (output, generation and distribution of income, use of income, accumulation). In line with the methodology, each account has the resource side and the use side and the balancing item of each account has its own economic contents. Transactions are to be understood as economic flows which correspond to the activities of institutional units. Transactions represent economic operations and the related flows carried out between economic units. According to their nature, they can be broken down into three main groups:

- transactions in goods and services (code P) which are related to production (national output or imports), exchange and use of goods and services (intermediate consumption, final consumption, capital formation or exports),
- distributive transactions (code D) by means of which the value added generated by residents is being distributed and the income or wealth is redistributed,
- financial transactions (code F) (transactions in financial means) are related to changes in financial assets and liabilities in particular sectors,
- other flows in accumulation accounts (code K), for instance, consumption of fixed capital (K.1), acquisition less disposal of non-financial non-produced assets (K.2).

The code B is assigned to balancing items which express the difference between the resources and use in the current accounts and the difference between assets and liabilities in the capital and financial accounts.

Balance items in the tables are given in gross term, i. e. including fixed capital consumption or in net term, i. e. without fixed capital consumption.

The Annual National Accounts contain the Goods and Services Account being compiled for the total economy only and consolidated accounts broken down by sectors and partially by sub-sectors: I. Production Account, II. Generation and Use of Income Accounts and III. Accumulation Accounts.

The Goods and Services Account (0) expresses real flows of goods and services, it does not have a balancing item and a possible difference is to be considered as a statistical discrepancy.

The Production Account (I) confronts the production with all what has been spent on its achievement. The balancing item is Gross domestic product at market prices (B.1g) which is the final result of activities of resident producers.

The Generation of Income Account (II.1.1) records distributive transactions related to production. The balancing item is net operating surplus (B.2) which corresponds to the Net domestic product at market prices less the rewards of employees and net taxes on production

and imports. It includes all other income being generated during the production process. In the sector of households, it represents the mixed income (B.3) (profit + compensation for work) of entrepreneurs not registered in the business register.

The Allocation of Primary Income Account (II.1.2) and the Secondary Distribution of Income Account (II.2) record transactions related to the distribution and redistribution of income among particular sectors of the System of National Accounts (SNA). The balancing item is disposable income (B.6) which expresses the income of the country (or the given sector) usable for the final consumption and savings.

The Redistribution of Income in Kind Account (II.3) records flows related to the use of particular goods and services which these households obtain free of charge. The balance item in this account is adjusted disposable income (B.7).

The Use of Income Account (II.4) shows how the disposable (or adjusted disposable) income is distributed among expenditures on the final consumption (or the actual final consumption) and savings.

The Capital Account (III.1) records the acquisition less disposal of non-financial assets of resident units and measures the changes in the net worth due to savings (the last balance item of current accounts) and capital transfers. The balancing item is Net lending (+), Net borrowing (–) (B.9) for total economy which is the sum of net lending and net borrowing of institutional sectors. They represent net resources which the total economy lends abroad (if they are plus) or borrows from abroad (if minus). The net lending (+) or borrowing (–) for total economy are equal, however with the opposite sign, to the net borrowing (–) or lending (+) from abroad.

The Financial Account (III.2) records transactions in financial assets and liabilities among particular sectors. The balancing item is Net changes in financial assets and liabilities (B.9) which should correspond to B.9 item's value in the Capital Account (III.1). The differences between items are caused by using different data sources in non-financial and financial accounts.

Generally speaking, the National Accounts are to be considered as compatible with the ESA 95 methodology if the following basic methodological principles are implemented:

- extension of the estimates of generation of assets
- calculation of the consumption of fixed capital in the sector of government from the replacement value of fixed assets
- recalculation into constant prices by the means of chained indices

- calculation of the financial intermediation services indirectly measured (FISIM) by the sector allocation method
- application of the item social insurance regardless the way of funding.

Within the compilation of Annual National Accounts for 1996, 1997 and 1998 according to the ESA 95 methodology, the implementation was extended by:

- the distinguishing of non-profit institutions serving households from those which serve to other sectors,
- the extension of estimates of the generation of assets for software, additional calculation for garages, garden huts, weekend houses and an additional calculation for a consumption and fixed capital formation in the commodity personal cars in the household sector,
- the calculation of financial intermediation services indirectly measured (FISIM) by the method of allocation to sectors,
- imputed rent, i. e. production of services of the owners of dwellings which they render to themselves calculated by the cost method and by including depreciation from the replacement value of dwellings,
- calculation of the replacement value of dwellings, garages, weekend houses and garden huts and personal cars based on quantities and market prices,
- calculation of consumption of fixed capital for housing stock from the replacement value of dwellings in all sectors which own dwellings,
- adjustment of an excessive increase of VAT paid and custom duties due to the change in financial rules (a partial application of the accrual basis principle),
- imputation of a part of illegal non-recorded economy for prostitution and sale of drugs,
- application of the item social insurance regardless the way of funding.

The **Supply and Use Tables** provide a background for a detailed analysis of the process of generation of resources of goods and services, their use and generation of income linked to the production process. Methodological basis for the compilation of commodity by industry tables for 1996 and 1998 is the ESA 95 methodology. In tables, there are indicators aggregated into categories broken down by commodities and main activity. The gross output and value added are expressed at basic prices while the intermediate consumption at purchaser's prices. Data on gross output are based on the Supply table and intermediate consumption indicator results from the 1. quadrant of the Use table. Other indicators (total final consumption, final consumption of households) are part of the 2. quadrant of the Use table. Data on value added and gross operating surplus are from the 3. quadrant of the Use table.

The estimate of commodity structure of the supply and use tables for 1998 is based on the supply and use tables for 1996.

The **generation and use of income in the sector of households** are calculated on the basis of an experimental recalculation under the ESA 95 methodology from the quarterly national accounts. They represent basic items of account in the sector of households, are part of the entire System of National Accounts and are mutually linked with other sectors of economy. Individual citizens as final consumers (a consumer household) and physical persons – entrepreneurs which carry out their business activities according to the Tradesmen Law or other legislative rules and are not registered in the business register belong to the sector of households.

Definitions

Production represents the value of goods and services which are the result of the activity of resident units during the accounting period in the territory of the Slovak Republic. Production is broken down into market production, own account production and other non-market production.

Intermediate consumption consists from services and goods of a short-term use which have been consumed or transformed by the production process within the accounting period.

Value added is a balancing item and is calculated by a subtraction of intermediate consumption from production.

Domestic product in market prices expresses the final result of the production activity of resident producers. It corresponds to the total production (at basic prices, i.e. it includes other net taxes on production) of resident producers after subtracting their intermediate consumption and adding the net taxes on products.

Within the **Final consumption**, two types of consumption are distinguished: **expenditures on final consumption** which include expenditures on the consumption of goods and services and may occur in the sector of government, households and non-profit institutions serving households and **actual final consumption** related to the acquisition of consumer goods and services which can be of a nature of the collective or individual consumption.

Gross fixed capital formation consists from expenditures on new capital goods or from other specific expenditures which the producers spend on goods and services in order to retain, increase or expand their production capacity or to create new production possibilities in the future.

Change in inventories is defined as a difference between the acquisition and disposal of inventories of the particular time period. Inventories include the stored material, work in progress, semi-finished goods of the own-production, goods, animals and stored goods.

Exports and imports of goods and services include exports and imports of goods from the trade balance and exports and imports of services from the balance of services. Exports and imports of services include all services related to the foreign activity (services of freight, passenger and other transport, insurance and other services).

Compensation of employees covers total compensation in a monetary form (or in kind) which is paid by an employer to the employee as a compensation for work being done by the employee during the given accounting period. Compensation of employees is broken down into wages and salaries and social contributions of employers. Social contributions of employers are further broken down into actual social contributions and imputed social contributions of employers.

Property income results from the ownership of financial assets, i.e. deposits, bonds or tangible non-produced assets (land and sub-soil assets) which the owner obtains as a compensation for providing them to or making them available for another institutional unit. Property income includes interest, distributed income of corporations (dividends, withdrawals from the income of quasi-corporations), re-invested profit from foreign direct investment, property income attributed to insurance policy holders and rent.

Current taxes on income and wealth, etc. are of the same nature as tax on income (of households, from the profit of corporations, of non-profit institutions), as well as the tax on wealth which are being paid regularly each tax period (on the contrary to the taxes on capital which are being levied irregularly). The transfers are in question because the government does not provide any counter-value to the individual unit paying taxes. Current taxes on income and wealth do not include inheritance taxes, death duties or taxes on gifts, occasional or exceptional levies on capital and wealth, taxes on land, buildings or other assets (owned or rented) which are used for production.

Social contributions and benefits are broken down into social contributions (actual and imputed), social benefits other than social transfers in kind and social transfers in kind which the government units and non-profit institutions serving households provide to individual households.

Other current transfers cover non-life insurance premiums and claims, transfers within general government, current international co-operation and miscellaneous current transfers

which represent transfers to non-profit institutions, transfers between households, fines and penalties, lotteries and gambling etc.

Source

The compilation of National Accounts is based on the following data sources:

- annual and quarterly state statistical surveys,
- banking information, e.g. monetary overview, balance of payments, banking statistics data,
- accounting statements and the sources of the Ministry of Finance of the SR,
- expert estimates of data based on the methodological recommendations of experts from Eurostat.

Detailed information is presented in the publications of the Statistical Office of the SR Macro-economic Indicators of the Quarterly National Accounts and Value Added; National Accounts of the Slovak Republic for 1997 and 1998; Supply and Use Tables by Commodities and Industries for 1998.

Methodological notes

Public budgets consist of national budget managed by the Government of the Slovak Republic, local budgets and state funds managed by the local self-government bodies.

Since 1998 revenues of state budget are without received credits and revenues from foreign credit repayment. Expenditures are without repayment of principals. In the table on structure of revenues and expenditures of the state budgets by type is presented classification of current expenditures on public consumption of the population and the government by budgetary chapters. There is only finance granted by the Ministry of Finance of the SR by way of budget chapters of the Ministry of Education of the SR, the Ministry of Labour, Social Affairs, and Family of the SR and the Ministry of Health of the SR.

Revenues and expenditures of local budgets (budget of municipalities on Slovakia in total) for years 1995 and 1996 are presented without special grants from state budget.

Revenues of state funds are presented without received credits and residues from the last year and expenditures are given without payment of principals of received credits.

In the Slovak Republic the area of **compulsory social security** is performed by the following institutions: Social Insurance Company, health insurance companies and National Labour Office.

Legislation framework for activity of the health insurance companies in the SR is determined by the laws of the National Council of the Slovak Republic No 273/1994, No 277/1994, No 98/1995, and No 280/1997 (Collection) in the wording of later regulation.

Social Insurance Company's activity is determined by the Law of National Council of the Slovak Republic No 274/1994 (Collection) in the last wording and the National Labour Office's activity by the Law on Employment of the National Council of the SR No 387/1996 (Collection) in the last wording.

Data on revenues, expenditures, insured persons or payers to the health insurance companies, to the Social Insurance Company and to the National Labour Office are obtained from annual statistical surveys. Reporting units are presented by the headquarters of organizations of compulsory social security.

Non-financial organizations are incorporated market entrepreneurial subjects in all branches of activity except banking and insurance. Subsidized organizations covering their expenditures by more than 50 % of revenues are also included. Those enterprises which are not corporations (households, tradesmen) are excluded.

Banking includes selected indicators on activities of the National Bank of Slovakia, commercial banks, investment companies and funds; data on insurance sector includes figures on commercial insurance companies.

Direct foreign investments in the Slovak Republic and investments of the Slovak Republic abroad express equity capital and reinvested earnings.

All figures are given at prices and in methodology and organization structure of the current year.

Definitions

State budget expresses centralized financial fund by which the state funds (finances) are created, divided and used.

Local budgets are compiled by local government bodies or by local self-government bodies. They contain expected revenues and approved expenditures of given bodies needed for fulfilment of their functions and works.

Public debt expresses accumulated financial liabilities of the public sector that are the consequence of higher public expenditures than revenues.

Incomes from insurance premium collection (for health and social insurance, pension security and insurance in unemployment contributions) include payments according to the valid laws.

Other payments include incomes of Social Insurance Company from arrears of payments, fines, regression compensations and penalties.

Other compensations for health care include first aid, air transport, extra compensations over the Treatment Order standard, treatment abroad, etc.

Scheme of health insurance benefits include sickness benefits, family member attendance allowance, equalising pregnancy and maternity allowance and maternity financial allowance.

Pension scheme benefits comprise old-age pensions, invalidity pensions, long-term

service pensions, survivor's benefits and orphan's pensions, other pensions before January 1, 1957, contributions to pensions of members of closed farming co-operatives.

Social insurance benefits paid by state include increase of pension due to single income source, increase of pension because of participation in revolt during the Second World War, increase of pensions for disability, social pensions, wife's pension, children allowances and extra contribution to the children allowances, child-birth allowance, funeral allowance, parental allowance, nursing service allowance, contribution to pay for occupation of an apartment, compensation for income when serving in armed forses and in civil service, reimbursement of health-resort care vouchers.

The **insured** in health insurance companies refer to the summarized data from registers of insured persons in the individual health insurance companies.

Costs present the sum of costs on operation, financial transactions and extraordinary costs.

Profit/loss expresses the result of economic activity of reporting unit for the time period. It is calculated as a subtraction of revenues from expenditures and has character of profit or loss. For statistical purpose it is given before taxation.

Liabilities express payment obligation of a debtor to domestic or foreign creditors. They express foreign investments for financing of current operation. Bank credits and short term-financial subsidy are excluded.

Receipts from own performances and goods express the receipts from own products, receipts from sale of services and receipts from goods.

Balance of payment contains the sum of all transactions (material as well financial) coming to the country and all transactions leaving the country abroad for the time period.

Money M1 – a money aggregate (mass of money) in the narrower sense of the word consists of the currency in circulation (after deduction of cash kept in bank teller's departments) and demand deposits (without the off-budget means of the governmental sector and the National Property Fund). Quantity of money in broader sense of the word – **M2** (liquid liabilities) includes, in addition to all M1 components, also the so called „quasi money" QM i. e., time deposits (without the off-budget means of the governmental sector and the National Property Fund) and foreign currency deposits (only deposits of residents converted by the actual exchange rate).

Bribor presents the reference interest rate of bank deposits in inland monetary market.

Capital market is a form of credits providing, which repayability is longer than one year. The

number of series of the securities issued is given by the amendment to the Law No 600/1992 (Digest) on Securities as amended and supplemented. Subscribed securities express the value of actually sold securities in a particular year.

Direct foreign investments in the Slovak Republic and investments of the Slovak Republic abroad is the increase in the invested capital flowing from abroad or abroad in the form of a financial or material investment. Foreign investment state as of December 31, 1999 is updated by state as of June 27, 2000. Data cover the capital part of the entrepreneurial subjects where the value of foreign assets and liabilities was more than 500 thousand SKK at the end of period and the value of invested capital was higher than 500 thousand SKK while the investment was direct or mediated through an investor. Data also include subjects with invested capital lower than 500 thousand SKK if other receivables and payables against abroad were higher than 500 thousand SKK and subjects fulfilled the reporting obligation.

Source

Source of published data on public budgets, local budgets and on economy of state funds is the Ministry of Finance of the SR. Data are taken from the State Final Account of the Slovak Republic compiled according to the Laws of the National Council of the Slovak Republic on Budgetary Rules.

Data source in financial sector is National Bank of Slovakia, Slovak Association of Insurance Companies and state statistical survey realized by the Statistical Office of the SR in this branch regardless of the number of employees.

All published data for the branch of compulsory social security and the branch of non-financial organizations are obtained from the statistical survey of the SO SR.

More information can be obtained in quarterly and annual publication Selected Indicators on the Health Insurance Companies, the Social Insurance Company and the National Labour Office, in quarterly publication Summary Economic Results and Acquisition of Investments in the SR.

Methodological notes

Since 1997 the **price indices** have been published in revised structures while the last years were recalculated by coefficients (conversion bridges) onto conditions of new schemes.

Price indices in production branch express the rate of production price changes of inland producers realized on domestic market.

In 1999 the scheme of **industrial producers price index** contains app. 2 990 representatives (products) of inland serial industrial production classified into sections 10 to 41 of the Classification of Production (KP). Constant weights derived from the structure of industrial receipts for year 1995 are used for the aggregation of individual products indices into higher classification levels. Since 1997 the total index of industrial producers prices has also covered the observation of drinking water prices. Price index of sewage water and its purification is surveyed individually. The base period is December 1995.

Products prices are surveyed for selected industrial producers on “primary market” i. e. during first market transaction between producer and customer. Prices do not comprise value added tax but include excise duties for products specified by law (hydrocarbon fuels and lubricants, beer, wine, spirit, tobacco and tobacco products).

Price index of raw wood covers 20 selected products (representatives) of coniferous and leafy raw wood assortments (KP 02). The index is calculated by using of constant weights derived from the sale structure in 1995. This index is published with 1995 average = 100 as a base. Prices of selected assortments of coniferous and leafy wood (excluding value added tax) are surveyed for selected more important producers. Besides changes in nominal prices the index also reflects the changes in the share of realized wood species.

The price index of agricultural products contains information on price level development for 115 main agricultural products (crop and livestock, fruit, vegetables) classified in KP 01. Indices are calculated from surveyed prices of production assigned for further processing or sale. Calculation of aggregates is based on constant weighting system derived from the average structure of agricultural production sales from 1993 to 1995. Individual months prices are the basis for price index calculation. The prices of agricultural products are surveyed in

selected producers during the sale to a customer (i. e. primary market) without value added tax.

Data on average prices of selected agricultural products is the average for selected qualities (without a non-standard) for crops and animals products and in fruit and vegetables for 1st quality.

The scheme of **price indices of construction works** is compiled from app. 580 representatives – selected items of construction works (KP 45). Weights system reflects by the construction production structure in 1995. The base period is average of 1995. Selected construction suppliers grant the prices for representatives without value added tax. Price of construction work per one measuring unit includes all costs needed to build a construction, i.e. all materials, semi-finished goods, labour costs, costs of the operation of construction machines, costs of transport, indirect costs (except equipment in the construction site) and profit. Total price index of construction work consists of the price index of new construction and of the price index of repair and maintenance.

The indices of deliveries of goods and services into agriculture and the price indices of materials and components used in construction express the rate of price changes on input side.

The index of deliveries of goods and services into agriculture includes products and services purchased by agricultural producers and consumed by agricultural production. It is calculated from surveyed prices of 110 kinds of important purchased products and services (selection of respondents is identical with the selection for the price index of agricultural products) and from price indices of selected groups, or KP classes, taken from industrial producers price index, price index of drinking and drainage water, construction works price index and the price index of communication performances. The index is published with 1995 average = 100 as a base. Value added tax is excluded from the purchase prices of products.

The price index of (production) materials and components consumed in construction contains price indices for selected materials and products (41 groups of KP) taken from price index of inland and foreign producers. The weights for index calculation were derived from the value of consumed construction materials in construction process in 1995.

The **indices of consumer prices and indices of living costs** are calculated from the prices of individual representatives collected from the network of selected shops and service business. The base period for calculation of consumer price index and living costs index is December 1995.

Consumer price index presents the price development on a generally averaged level. Living costs indices are also the price indices that show how the different expenditure structures of individual social groups of households influence their changes. The coverage of representatives in the consumer price index as well as in living costs indices is the same besides that some products and services are excluded from those households in which their consumption is insignificant.

Representatives of consumer basket are updated yearly. Consumer basket is divided by COICOP (Classification of Individual Consumption by Purpose) used by the countries of the European Union. In August 1999 the universal consumer basket was extended from 708 to 712 representatives.

Several standards required for calculation of harmonized consumer price index of member countries of the European Union are applied in processing of consumer price index.

Average consumer prices of selected products refer to averaged prices for the SR calculated from the prices surveyed in selected shops and service business.

Definitions

The price indices are created as sample indices of constant structure (influence of structure change onto price index level is excluded). Summary indices are calculated by aggregation of individual simple indices of representatives prices by convenient weights system, i.e. structure of receipts from sales of products (expenditures of households for goods and services) in the basic year. The index schemes (system of weights, representatives and respondents systems) are regularly (5 years interval) revaluated and adapted to actual structures. Since 1997 price indices are calculated against December 1995 or average of 1995. For calculation of price indices and living costs indices is used Laspeyres formula.

Producers price refers to contract price agreed between producer and inland customer invoiced for more important business transaction realized in the middle of current month excluding value added tax and costs for transport to purchaser and costs related to transport.

Consumer price is contract price agreed between seller and final consumer. It includes producer price, price of business performance (wholesale or retail trade margin), value added tax and other taxes (e. g. excise tax).

Source

All published data is the result of regular surveys and processing realized by the Statistical Office of the SR.

Data source for calculation of **price indices in production branch** is the state statistical questionnaires submitted by selected reporting units. More information can be found in monthly publications Price Indices of Industrial Producers, of Drinking and Drainaged Water and Raw Wood; Producer Price Indices of Agricultural Products; Price Indices of Construction Works, Materials and Components Used in Construction Industry and in quarterly publication Price Indices of Deliveries of Goods and Services into Agriculture.

Consumer prices of goods and services for calculation of a**verage prices and indices of consumer prices and living costs** are surveyed in selected shops and service business in the Slovak Republic. More information on consumer prices and living costs indices can be obtained in monthly publication Consumer Price Indices.

III.1 Territory and Climate

Methodological notes

Selected data on location, area and the highest mountains of the Slovak Republic, meteorological data on selected stations, hydrological data on selected water-courses, data on main rivers on the territory of the Slovak Republic, areas of their basins and length of water-courses creating a border of the Slovak Republic on neighbouring countries are obtained from non-statistical sources on the basis of measurement, records and methodology used in corresponding institution.

Source

The Statistical Office of the Slovak Republic acquired geodesic data from the Geodesic and Cartographic Institute. Meteorological and hydrological data were granted by the Slovak Hydrometeorological Institute.

More information can be obtained in given institutes.

III.1–1. Rozloha a hranice Slovenskej republiky v roku 1999
Area and borders of the Slovak Republic in 1999

Ukazovateľ	V absolútnych číslach In absolute numbers	V percentách In per cent	Indicator
Rozloha k 31. 12. v km^2	49 035	x	Area as of December 31, in km^2
Hustota obyvateľstva na 1 km^2	109,9	x	Population density per km^2
Obvod v km	1 672,0	100,0	Perimeter in km
Dĺžka hranice v km s Českou republikou	251,8	15,1	Lenght of the border in km on: Czech Republic
Maďarskom	668,6	40,0	Hungary
Poľskom	547,1	32,7	Poland
Rakúskom	106,0	6,3	Austria
Ukrajinou	98,5	5,9	Ukraine
Najnižšie položené miesto – vyústenie rieky Bodrog zo SR – v metroch nad morom	94	x	Altitude of the lowest place – place where the river Bodrog is leaving the Slovak Republic in metres above sea level
Najvyššie položené miesto – Gerlachovský štít – v metroch nad morom	2 655	x	Altitude of the highest place – Gerlach Peak in metres above sea level
Najdlhšia rieka – Váh – v km	378	x	The longest river Váh – in km
Najdlhšia dolina – Bielovodská – v km	10	x	The longest valley – Bielovodská – in km
Najvyšší vodopád – Kmeťov – v m	90	x	The biggest waterfall – Kmeťov – in m
Najhlbšia jaskyňa – Starý hrad – v m	432	x	The deepest cave – Starý hrad – in m
Najdlhšia jaskyňa – Systém Demänovských jaskýň – v km	24	x	The longest cave – Demänovské Caves Systém – in km
Najväčšie jazero – Veľké Hincovo pleso – v ha	20,08	x	The largest lake – Veľké Hincovo pleso – in ha

III.1–2. Poloha územia Slovenskej republiky
Location of the Slovak Republic's territory

Medzná súradnica Limiting coordinates	Poloha Location	
	Okres District	Obec Municipality
Južná 47°43'54" s. š. Southern 47°43'54" N	Komárno	Patince
Severná 49°36'52" s. š. Northern 49°36'52" N	Námestovo	Oravská Polhora
Západná (Greenw.) 16°50'05" v. d. Western (Greenw.) 16°50'05" E	Malacky	Záhorská Ves
Východná (Greenw.) 22°34'04" v. d. Eastern (Greenw.) 22°34'04" E	Snina	Nová Sedlica

III.1–3. Maximálne dĺžky na ploche Slovenskej republiky
Maximum distances on the area of the Slovak Republic

Ukazovateľ Indicator	Vzdušná vzdialenosť (km) Beeline distance (km)
Spojnica najsevernejšieho a najjužnejšieho bodu Connecting line of the northernmost and southernmost points	226
Spojnica najzápadnejšieho a najvýchodnejšieho bodu Connecting line of the westernmost and easternmost points	429
Maximálna dĺžka v smere poludníka Maximum distance in the direction of the meridian	197
Maximálna dĺžka v smere rovnobežky Maximum distance in the direction of the parallel	395

III.2 Population

Methodological notes

Data on **natural movement of the population** is obtained from statistical reports on population phenomena (marriages, divorces, births, deaths) and from the related population balances.

Data cover all inhabitants residing permanently in Slovakia regardless of their nationality. In this branch the statistical bodies closely collaborate with further government bodies, which are reporting units (registry, law courts).

The basis for next ten years term balancing is regular decennial population censuses. Irregular sample population surveys (Microcensus) present a supplementary source.

Demographic statistics includes the statistics on spontaneous and induced abortions.

The methodology and the content of demographic statistics is internationally comparable.

The processing by classification point of the view is done according to the Code-List of administrative-territorial division, nationalities and education.

Number of the population by nationality between two censuses on population is obtained from the balance of natural movement of the population. The nationality of live-born children is determined by the nationality of the mother.

Death causes have been processed according to the International Statistical Classification of Diseases and Related Health Problems, the tenth revision.

Migration statistics is surveyed in two levels: internal migration and external migration.

Internal migration from municipality to municipality in the same district implies either moving among the urban areas under the operation of the district authorities as in the case of Bratislava, the capital of the Slovak Republic or intramunicipal moves under the operation of the district authorities in Košice.

External migration is a change in the country or residence, irrespective of nationality. Names of the countries are used according to the ISO standard No 3166-93.

Stay registration offices of municipal and town offices, district police directorates and departments of border and alien police in Bratislava are included in reporting units.

Definitions

Mid-year population is the number of the population as of July 1 of the reference year.

Population in **pre-productive age** consists of inhabitants aged from 0 to 14. Population in **productive age** includes men aged from 15 to 59 and women aged from 15 to 54. The **post-productive age** population includes men and women aged 60 and more and 55 and more, respectively.

Ageing index represents the ratio of post-productive population to pre-productive population.

Neonatal mortality is the number of deaths of children under 28 days of age per 1 000 live-born children in the same period.

Infant mortality are the deaths of children under 1 year of age per 1 000 live-born children in the same period.

A live-born child is a child showing at least one of the following signs of life at birth such as breathing, beating of the heart, pulsation of the umbilical cord, active movement of muscles though the umbilical cord has not been cut or the placenta has not been born. At the same time, the birth weight is

a) 500 and more grammes or

b) 499 grammes and less if a child survives 24 hours after its birth.

Natural increase in the population shows the difference between the number of live-born children and number of the deceased.

Total population growth is the difference between the population of a given area at the beginning of the period and at the end of the period. It is the sum of natural increase and net migration.

Women aged 15 – 49 belong to the so-called **„fertile age“** group.

Total fertility rate represents the number of live-born children that would be delivered by each woman throughout her whole reproduction period (from 15 to 49 years of her age), provided that during this reproduction period the fertility rate of women by age has not been changed and remains at the level of the year for which total fertility has been calculated.

Gross reproduction rate shows how many live-born girls would be delivered by one woman throughout the whole reproduction period, i.e. from 15 to 49 years of her age, provided that the fertility rate level in the reference year was kept on.

Net reproduction rate shows how many of these girls would live to the mother's age reached at the time of their birth if the mortality level in the reference year continued.

Methodological notes

Labour force sample survey is a permanent monitoring of labour force on the basis of a direct surveying in selected households. The survey is based on a random selection of dwellings in all districts of the Slovak Republic. Every quarter the sample covers 10 250 dwellings, which is 0.6 % of the total number of permanently occupied dwellings in the Slovak Republic. The survey covers all persons aged 15 and over who live in the households of the selected dwellings without regards to permanent, temporary or unregistered stay, institutionally population excepted. Each selected household remains in the sample for 5 subsequent quarters. All surveyed figures are recalculated by the current demographic data on the population of the SR.

In processing by classification viewpoints there are Classification of Occupation, Classification of Education, the Code-List of administrative-territorial division and others applied.

The methodology of the survey is recommended by International Labour Organizations and by Eurostat.

Employment and wages by enterprise reporting are surveyed in the framework of monitoring of the SR economy development. Persons on maternity and additional maternity leave and armed forces are not included among employees. Processed data for organizations with 20 and more employees is classified by administrative-territorial division, by staff categories, by kind of property and by legal form of organization.

Basic information on the development of wages are completed with data on the **structure of gross monthly wages** obtained by sample survey on the structure of employees wages in the Slovak Republic. In processing by classification viewpoints there are Classification of Occupation, Classification of Education, the Code-Lists of administrative-territorial division, sex and age applied.

Wages statistics also includes the survey on **total labour costs** of employers in the Slovak Republic. The more detailed classification of the labour costs uses the Code-Lists of administrative-territorial division, staff categories, kind of property and legal form of organization.

The methodology of the sample survey on the structure of wages and total labour costs is recommended by Eurostat and responds to the related European regulations.

The processing of selected labour market indicators uses the Branch Classification of Economic Activities (NACE).

Definitions

Economically active persons by labour force sample survey (LFS) are persons aged 15 and over who are civilian employed, unemployed or members of the armed forces (conscripts and professionals in military service).

Economically inactive population by LFS are persons who have no job in the reference week because they are students and apprentices, pensioners, persons keeping household, persons in re-training course and therefore they do not seek a job actively during the last four weeks or they are seeking a job but they are not able to start work within 14 days. Persons on additional maternity leave, discouraged workers (they would like to work but they do not seek a job because they do not believe to find adequate job) and persons younger than 15 years are also included.

Economic activity rate by LFS is calculated according to the following formula:

$$\text{Economic activity rate in per cent} = \frac{\text{Number of the economic active persons}}{\text{Population in productive and post-productive age}} \times 100$$

Population in productive age are men aged 15 – 59 and women aged 15 – 54, population in post-productive age are men aged 60 and more and women aged 55 and more.

Employed by LFS are all persons aged 15 and over who are working at least one hour for pay or profit (full-time or part-time job, permanent, temporary, casual or seasonal job) in the reference week, as well as contributing (unpaid) family workers, professionals in military service, person in substitute civil service and persons working abroad. Data on employed include persons not working in the reference week due to illness, holiday, maternity leave, study, weather conditions and strike or dispute, except persons on long-term unpaid leave from work. Persons on additional maternity leave are not included among employed.

Employees by LFS are persons aged 15 and over who work in the reference week at least one hour and who receive compensations in the form of wage or salary, including members of productive co-operatives. **Employees according to the enterprise reports** are all the stable as well as temporary employees regardless of their citizenship who have a contract of employment, service or membership with the employing organization. Students attending secondary vocational apprentice training centres, persons on compulsory military or civil service, persons on maternity and additional maternity leave and persons working upon contract are not included among employees. The number of employees in the economy of the Slovak Republic does not include members of the armed forces.

Self-employed by LFS are entrepreneurs with employees (employers), entrepreneurs without employees (own-account workers) and contributing (unpaid) family workers.

Unemployed by LFS are all persons aged 15 and over who are not working for pay or profit during the reference week, who are actively seeking job during the last four weeks and who are able to start work in the next two weeks. Those persons can but need not be registered at labour offices as unemployed. The category of unemployed also includes persons not in employment who had already found a job which will start within 1 month and person on long-term unpaid leave who do not seek a job because expect their return to work.

A registered applicant for a job (an unemployed person) is a person who is neither in employment nor a member of an organization, does not perform any independent gainful activity, nor is getting ready for an occupation and is personally applying, on the basis of a written application, for the intermediation of an appropriate job at labour offices. People who are interested in a job and are in employment or perform an independent gainful activity and are interested in a different job are not included. Methodology of indicators has been determined by the Ministry of Labour, Social Affairs and Family of the SR and is available in the National Council of the SR Law No 387/1996 (Collection) on Employment.

The registered unemployment rate (methodology of the Ministry of Labour, Social Affairs and Family of the SR) is calculated according to the following formula:

$$RUR = \frac{RU}{EAP} \times 100$$

RUR – Registered unemployment rate in per cent
RU – number of the registered unemployed (since 1997 disposable number of the registered unemployed)
EAP – number of economically active persons (working persons including person on maternity and additional maternity leave + registered applicants for a job)

Since December 1997 the registered unemployment rate has been calculated from **the disposable numbers of the registered unemployed** who can immediately, after being offered a suitable job, start to work. This practice complies to the convention of the International Labour Organization. **The unemployment rate by LFS** is calculated by the same formula, however, the economically active population in the denominator of the formula does not include persons on additional maternity leave.

Vacancies are new or out-standing vacancies reported by employers to labour offices.

Average wage consist of basic (tariff) wage set by wage rules including basic components of contracted wages and salaries for working overtime, compensation of wage not worked out hours, monthly and long-term bonuses paid according to the performance and evaluation criteria, extra payments for working overtime, the night work, work during Saturdays and Sundays, holidays, for environment damaging health, noise, risky and hard work, in-kind wages express in financial terms and other wage in the form of wage advantages whose level and periodicity is set in advance regardless of the situation in an enterprise. Wages have not been including pays from profit after taxation since 1996 and bonuses for being on call to work since 1998.

Total labour costs represent a sum of cost spent by employer to recruit and train their employees, remunerate their work as well as to ensure their social welfare according to obligations adopted. Total labour cost include both direct labour costs and indirect labour costs minus subsidies. **Direct labour cost** are the sum of direct remuneration and bonuses, payments for days not worked, payments to employee's savings schemes, bonuses for being

on call to work, bonuses based on profit and other direct costs. **Indirect labour costs** include compulsory and supplementary social security contributions, employer's imputed social contributions, personnel vocational training costs on employees, remuneration of apprentices, personnel recruitment costs on employees, social benefits and taxes linked to wages paid by employer. **Subsidies** are the sum of all amounts received in the form of subsidies, which are intended to refund a part or all of the cost of direct remuneration.

Source

All published data is the result of the processing in the Statistical Office of the Slovak Republic, except data relating registered unemployed. This data is supplied by the National Labour Office.

More information can be obtained in quarterly publications Employees and Average Monthly Wages; The Labour Force Sample Survey Results and in annual publications Structure of Wages of Employees and Total Labour Costs.

III.4 Fixed Assets

Methodological notes

Fixed assets data covers the value of the assets of all legal entities. It does not include the value of fixed assets of tradesmen, population and fixed assets owning by churches in case that the legal procedure and pricing has not been finished. The data on fixed assets for 1998 was presented for the economy in total in the summary table containing basic indicators; all other tables present the organizations with 20 and more employees.

Branch classification of procured investments and fixed assets is given according to main economic activity of organization. Classification of gross capital stock by use is based on performing economic activity. This classification need not be identical with the classification of whole organization into main branch of economic activity. Fixed assets are aggregated in entrepreneurial and non-entrepreneurial units by legal form of organization. Ownership of fixed assets is aggregation of ownership of the owner or organization owning the fixed assets. Fixed assets are aggregated in national accounts sectors according to the ESA 1995 system.

Age structure of fixed assets was surveyed as of December 31, 1998 after eleven years for tangible fixed assets, of which buildings and structures (of which buildings for housing, machinery, apparatus and equipment and transport equipment) were the subject of surveying.

Unless otherwise specified, fixed assets are given at purchase prices.

Definitions

Fixed assets consist of all assets of intangible and tangible character on which an economic subject has the right of ownership or right of management. Fixed assets consist of two groups of assets: intangible and tangible.

Intangible fixed assets consist of incorporation expenses, capitalization development costs, software, copyrights, patents, licenses, trademarks, low-value intangible fixed assets and other intangible fixed assets, whose value in individual cases is more than 20 thousand SKK, the service life is more than 1 year. Intangible assets whose individual components have the value of 20 thousand SKK and less while the service life is more than one year may be included into low-value intangible fixed assets if so decided by an accounting unit.

Tangible fixed assets are the real estates and separate movable things or sets of movable things whose purchasing price is more than 10 thousand SKK in individual case and the operational and technological function is longer than one year. The accounting unit may set that the tangible fixed assets also include low-value tangible fixed assets whose purchasing price is less than 10 thousand SKK and operational and technological function is longer than one year.

Procured investments express the total costs spent per year on procurement of fixed assets. It means the costs for purchase of new and used fixed assets, costs on procurement of fixed assets created by own-account production or free of charge procurement, gifts, transfer in accordance with the effective legal rules or shift from personal using to using for business purposes. The mentioned costs cumulated during process of procurement represent the value of procured investments but only till the moment of completion of procuring process. By introduction of fixed assets in use, the process of procuring is completed and the economy activity of fixed assets launches.

Procured tangible investments include costs spent on the procurement of tangible fixed assets per year. It means the costs on procurement of lands, buildings and structures, machinery, apparatus and equipment, transport equipment, plantations, livestock for breeding, dairy and draught, low-value and other tangible fixed assets, valuables (works of art and collections).

Construction part of procured investments includes costs spent per year on construction or purchasing of buildings, structures and halls including buildings for housing. According to the ESA 95 methodology construction part of procured investments also covers adjustment of values for garages, recreation and garden cottages.

Machinery part of procured investments includes the costs spent on purchase or production of machinery, apparatus, equipment and transportation means per year.

Other investments include the costs spent for procurement of lands, plantations, livestock for breeding, dairy and draught, low-value tangible tangible assets and other tangible assets and works of arts and collections per year.

Procured intangible investments include the costs spent on procurement of intangible fixed assets per year. It means the expenses related to the establishment of a corporation, capitalization development costs, software, patents, licences, trade marks and copyrights, low-value and other intangible fixed assets.

Completed dwellings are those that were passed as acceptable by an approving officer after construction completion. It refers to completed dwellings in constructions intended for living, i.e. in housing buildings, family houses and flats in constructions non-intended for housing. Completed dwellings refer to dwellings acquired by new construction, improvements or another construction repairs.

Average living area of completed dwelling expresses housing space (m^2) per one completed dwelling.

Living floor space of completed dwellings is the area of all rooms of completed dwelling. The floor space of completed dwelling does not include common non-housing space serving for all users of flat (staircase) and non-housing rooms used by users (cellars, room for prams, common laundry) and balconies or loggias.

Net capital stock expresses the value of fixed assets in net book value as of the end of the year. It is the value of fixed assets after deduction of depreciation from purchasing price. Evaluation of fixed assets is based on book-keeping records.

Change in gross capital stock expresses growths of fixed assets for year by several ways of their acquisition and their introduction in use. It can be the purchase of new or used fixed assets, own-account production, restitution of property based on legal regulations (restitution, legal decisions), dedication, transfers between organizations. The change is on the other hand influenced by disposals of fixed assets occurring during a year, e. g. a sale, transfers by legal regulations, liquidation of fixed assets caused by full depreciation or dedication of fixed assets to another organization.

Gross capital stock per year by groups includes all types of tangible and intangible fixed assets in those branch of economic activity classification, where all organization is involved (main branch of economic activity). Gross capital stock is the indicator of state.

Gross capital stock per year by using includes fixed assets involved in the framework of every reporting unit into economic activity using fixed assets. This classification is not generally identical with the classification of all enterprise or organization by main branch of economic activity.

Consumption of fixed capital represents depreciation – the amount of fixed assets used up during the year as a result of production activity as well as service providing.

Accumulated consumption of fixed assets expresses accumulated depreciation from historical purchased price of fixed assets.

Age structure of tangible fixed assets as of Dec. 31, 1998 expresses the view on intervals of years when the selected groups of tangible fixed assets were produced or procured.

III.5 Research and Development

Methodological notes

Research and development (R&D) surveys are realized in independent research and development institutions in which research and development is their prevailing activity, as well as associated research and development working places in those organizations whose prevailing activity is different from research and development, but their R&D potential calculated to the full time equivalent (FTE) is equal at least to one man/year.

R&D activities include basic research, applied research and experimental development.

Methodology and content of R&D statistics is comparable with international statistics of the European Union.

Licence statistics includes a licence contracts between an inland and a foreign partner. Licence surveys are carried out in all enterprises with 20 and more employees, which have valid licence contract with a foreign organization during the whole period of validity of the licence contract till year, when the validity of the last licence is expired.

Data is given only on licence contracts made in the current year, not on all licences that were in force in the given period.

Industrial legal protection statistics contains patents, utility models, industrial designs and trademarks.

Statistical survey on **certification** includes certified products and certified quality management systems. Reporting units are the industrial organizations with 20 and more employees. The survey is realized with two-years periodicity.

The data is given only for the new products introduced and certified in the current year and for organizational parts of the reporting unit that have obtained a certificate for their quality management system by the ISO 9000 standards in the current year, not for certificates granted in the past years which had been valid in the given year.

Data is given in the prices and by methodology of the current year.

Definitions

The number of **R&D employees** includes only people employed directly in the field of

research and development as well as workers providing direct services to research and development. Total number of R&D employees includes also pedagogical staff at universities who within the framework of their work to a certain extent participate in research and development.

Category of „researchers“ comprises employees essentially important to the creation and use of the scientific knowledge.

Technical and equivalent personnel includes employees participating in the research projects by performing scientific and technical tasks usually under the supervision of researchers.

Supporting staff includes qualified and non-qualified workers, secretaries and other employees participating in the work on R&D projects. Further there are included other managers and administrative workers dealing with personnel and financial matters whose activities are qualified as a direct service supporting research.

Expenditures on research and development comprise total amount of expenditures spent in an organization on R&D activities, i.e. they are internal expenditures. Expenditures spent out of the organization include only those serving for support to the internal research and development (for instance purchase of equipment for R&D institutions). Depreciation of buildings, machines and equipment is excluded from statistical observation of internal expenditures on R&D.

Current expenditures comprise costs of own activities of organizations and workplaces of research and development and costs of tasks solved by the own capacity of an organization and a workplace. (It is a sum of operational and financial costs related to R&D activities.)

Licence is a contract between a domestic and a foreign partner for the acquisition (purchase) or provision (sale) of the right to the use of: an invention under copyright, industrial design, a trademark of an original owner and know how. Licences are divided from the point of view of their purchase or sale into:

a) Passive licence is a licence bought from abroad, on the basis of which domestic organizations produce or use it.

b) Active licence is a licence sold abroad.

According to the Law No 527/1990 Digest **patents** shall be granted for inventions which are new, involve an inventive step and are susceptible of industrial application.

It is possible to protect as **utility models** technical solutions which are new, exceed the framework of the mere professional ability and are susceptible of industrial application but do

not comply with the strict terms for the granting of a patent. Contrary to the protection by a patent, neither process or production nor biological reproductive matter shall be protected by a utility model.

External appearance, which shall be new and susceptible of industrial application is considered as an **industrial design**. The external appearance shall comply with these conditions: it shall be two- or three-dimensional and have the unique features in particular of its shape, contour, design, colour arrangement or combination thereof.

Trademark shall be denomination consisted of the words including personal names, letters, numbers, designs, product's shape or its packing or combination thereof as well as colour combinations, which are capable of distinguishing goods and services of different entrepreneurs and which have been registered in the trademarks register.

Classification of inventions by subject is based on the international patent classification.

Certified products are the products with a valid certificate issued either by an accreditation place on the basis of the Law on State Testing Lines or by a foreign organization. A certificate verifies that the properties of a certified product are in conformity with the relevant standards, technical documents or laws.

Certified quality management system is a system of quality provision of a proposal, development, production, assembly, installation and service in a productive organizational component of a reporting unit. This system has been certified by a Slovak certification body or foreign organization.

Source

All data on R&D, licences, certified products and certified quality management systems is from the results of the Statistical Office of the SR processing. Data on industrial legal protection is kept by the Statistical Office of the SR from the informational system of the Industrial Property Office of the SR.

More information can be obtained from annual publications Selected Indicators of R&D Organizations and Licences and from publication Certified Products and Certified Quality Management Systems, which has two-year periodicity since 1998.

III.6 Organizational Structure of the Economy

Methodological notes

Data on organizational structure of the economy is compiled on the basis of data kept in the Register of Organizations. The register is created and updated by the Statistical Office of the SR according to the Law No 322/92 Digest on Government statistics in wording of later regulation. The Register of Organizations is regularly updated by data from Business register, Tradesmen register and from statistical surveys. It contains identification and classification characteristics on legal persons and natural persons-entrepreneurs.

Data in the tables concerns only those legal and natural persons specified in the Register of Organizations of the Statistical Office of the SR as economically active.

Definitions

Legal persons are legal entities. The law adjusts their existence independently on individuals or institutions that are their owners or their members.

Natural persons are persons, who undertake on their own liability according to special rules. These are tradesmen, persons with freelance professions (people running business on the basis of a law other than tradesmen law e.g. lawyers, physicians, auditors and others) and self-employed farmers.

Trading partnerships are legal persons that were founded for business purpose. They include limited liability companies, general partnerships, limited partnerships and joint stock companies.

Profit-oriented organizations are incorporated legal persons with running business to make profit.

Non-profit oriented organizations are legal persons (e.g. budgetary organizations, subsidized organizations, whose receipts didn't exceed 50 % of presented costs, associations, political parties, churches and others.

Public sector includes organizations in state, municipal and international ownership being under the state control.

Private sector includes organizations in ownership of private inland and foreign of legal as well as natural persons and organizations with foreign interest not being under the state control.

Foreign ownership includes organizations founded and controlled by a foreign legal or natural person.

International ownership includes the organizations that were founded jointly by a inland and a foreign legal or a natural person.

Source

Source of data is the Register of Organizations of the Statistical Office of the SR. More information can we obtained in the Statistical Office of the SR.

Methodological notes

In total number of **protected territories** centrally controlled protected large-scale and small-scale territories are included. Large-scale protected territories include national parks and protected landscape areas. Small-scale protected territories include state nature reserves, protected finding-places, protected parks and gardens, protected study areas, protected products of nature and protected natural monuments.

Some small-scale territories can be also located in the area of large-scale territories, i.e. in the area of national parks or protected landscape areas. Therefore their area is included into large-scale and small-scale categories, too.

Penalties for air pollution as well as in the sector of water management, waste management, and nature protection are imposed on legal entities for breaking their duties provided by the relevant laws and administrative orders.

Intensity of immission load in interaction with ecological factors is expressed by zones of endangered forests – categories A, B, C, D:

Zone A comprises areas with a strong long-term load in the localities exposed to intensive air streams from immission sources (local and from long-distance pollutant transport).

Zone B includes areas under the same immission conditions as Zone A but under better ecological conditions in the localities partially protected against direct air streams from immission sources.

Zone C comprises areas under more favourable ecological conditions with a lower immission load.

Zone D are protected fluvial areas of various altitudes with a low immission load and low level of air pollution.

Endangered zones are those parts of forest ecosystems where intensity of load together with ecological conditions and climatic factors causes their dynamic damages. Attributes of these zones are the level of immission load and longevity of stands of a specific species composition derived from the model for mature spruce stands.

Degrees of damage to stands are derived from the state of stands and are based on the

evaluation of defoliation and depigmentation of trees. A qualification scale of the international health monitoring is applied.

0 – Healthy trees, damage (0 – 10 %)
1 – Slightly damaged trees (10.1 – 25.0 %)
2 – Medium damaged trees (25.1 – 60.0 %)
3 – Heavily damaged trees (60.1 – 90.0 %)
4 – Dying and dead trees (90.1 – 100 %)

Abiotic injurious factors (drought, wind, snow) are important from the point of view of volume of salvage felling. Together with immissions produce conditions for further activation of biotic factors.

The most important biotic injurious factors are insect, vertebrate animals (mainly game animals) and fungal diseases.

Categorization of game to commercial and predacious animals is from practical point of view relative and is important mainly from economic standpoint. For this reason a notion of „predacious animals“ started to be used under which belong individual game species (predators) that cause damage to commercial game (it is a component of the food chain). Division of game into furred and feathered one is a species division and is of biological importance.

Data on **xenobiotics** in foodstuff were received from records on individual cases during the reference year.

As a limit is defined the highest acceptable amount of xenobiotics in the given foodstuff; is determined by Bulletin of the Ministry of Health of the Slovak Republic, Part 9 to 13, of July 15, 1996. Until December 31,1996 limits were determined by Decree of the Ministry of Health of the Slovak Republic of December 10, 1993.

Values presented as average represent an average content of xenobiotics in concerning foodstuff calculated from individual contents.

Data on **waste** originating in the territory of the Slovak Republic are surveyed according to the valid legislation.

In 1996 the methodology of cesspool waste measurement was changed.

The separate table shows the amount of municipal waste and similar waste to it not treated by municipality and which was produced in activities of legal or natural persons entitled to enterprising in particular branches of the national economy.

Definition

Protected territory is geographically defined area marked or controlled and administrated for the purpose to reach the specific aims of preservation.

Commercial forests are those whose main purpose is a production of quality timber while ensuring other roles of the forest.

Protection forests have function of protection and conservation of biological using.

Forests of special purpose are those having functions resulting from specific important social needs because of which the way of management is adjusted.

Hunting ground is continual hunting land up to 500 ha at least.

Xenobiotics in foodstuff are those that are not a natural component of foodstuffs and they are not characteristic for the given kind of foodstuff or their amount can have a negative impact on the human health.

Waste is an article, its owner wants to get rid of or things, which must be removed from the point of view of production of proper living conditions and protection of environment.

Municipal waste is the waste originating in municipalities and is treated further by the municipality. Households waste and waste produced in activities of municipality, legal entities, transport, recreation and sport are included.

Source

Data on protected territories and national parks as well as data on state of stands are provided by the Ministry of Environment of the SR. Data on hunting ground, hunting and spring stock of game are taken from materials of the Ministry of Agriculture of the SR. Further information can be obtained in these ministries.

Data on waste are the result of the processing of the Statistical Office of the SR. More information can be obtained in the publication Waste in the Slovak Republic.

Methodological notes

Data on **emissions of major pollutants** by economic activities covers pollution of air by injurants produced by industry, energetics, agriculture, transport, housing and municipal spheres. The quality of air depends on the level of emissions from individual sources of air pollution and is expressed as immissions monitored by individual monitoring stations.

Data on emissions for energetics and process combustion include data for emissions from process combustion and from stationary units for fuel combustion with thermal output of 0.2 to 5 MW which are the part of technological units.

Local heating facilities also include central heating with the output up to 0.2 MW.

Emissions from industrial technological processes are the sum of emissions from relevant technological processes and emissions from combustion processes which are the part of the source (boiler house).

Burdened regions are declared on the basis of the Decree of the Ministry of the Environment of the SR No 112/1993 Collection on the definition of regions requiring special air protection and on the operation of smog signal and regulation systems.

Levels of **immissions in selected localities** are assessed on the basis of a continual measurement done at individual monitoring stations.

Data on regional air pollution are presented for the four monitoring stations (Chopok, Liesek, Stará Lesná, Starina), which are the part of the European monitoring network EMEP.

Levels of surface ozone in selected monitoring station are assessed on the basis of the eight-hour concentration (time of measurement is from 9 a.m. to 5 p.m.).

Regional air pollution informs on acidity and chemical composition of precipitation obtained from regional monitoring stations and from city station in Bratislava.

Definitions

Mobile sources of air pollution is the road, railway, water and air transport equipment with explosion engine or other driving engines.

Stationary sources of air pollution are all the other sources emitting pollutants.

Region declared burdened is at least 50 square kilometres large and:

- an individual annual immission limit is exceeded,
- half-hour or daily immission limits of two pollutants for SO_2, NOx (solid emissions) and CO are exceeded in more that 5 % of cases,
- bad smell pollutants are present in concentrations bothering the population.

Indicator called „maximum 30'" represents the maximum level of the thirty-minute concentration in an observed year.

Regional air pollution is a pollution of the atmosphere boundary layer in the countryside sufficiently far from the local industrial and municipal sources. Injurants in this layer of the atmosphere are getting involved into the global circulation.

Source

All data on air quality are taken from the Slovak Hydrometeorological Institute, where further information is available.

Methodological notes

Water-supply systems and sewage includes waterworks activities related to the administration and operation of water-supply and sewage systems, i.e. production and supplies of drinking water and drainage of sewage water and its purification.

Length of dikes protecting against flooding is measured in the axis of a dike and on each bank separately. Length of artificial canals and intakes includes also canals and intakes kept in covered profiles.

Values of individual pollutants drained off into the water-courses are presented for the Water Plants and Sewage companies as well as for the River-basin companies.

Values of the **water pollution** are shown for producers monitored by the Water Plants and Sewage companies as well as River-basin ones.

Categorisation into individual quality categories by five groups of indicators is done by the STN 75 7221 Classification of the Surface Water Quality valid since January 1999.

A set of indicators – oxygen balance
B set of indicators – basic physical and chemical indicators
C set of indicators – nutrients
D set of indicators – biological indicators
E set of indicators – microbiological indicators

Surface water by water quality is categorised into the following 5 categories:

Category 1 – very pure water
Category 2 – pure water
Category 3 – polluted water
Category 4 – heavily polluted water
Category 5 – very heavily polluted water

Definitions

Dam is an inflating construction damming up the river-bed or, exceptionally, valley that

serves for formation of a reservoir to get a permanent or temporary inflation of the water for various waterworks purposes.

Water reservoirs are these from which water offtake for public water supply is realized.

Controllable volume of water reservoirs is a total controllable capacity of reservoirs where it is possible, regardless of tributaries to the reservoir, to accumulate and to empty the water as necessary. Retentive volume of water reservoirs is a controllable protective capacity of the reservoir. Reserve volume of water reservoirs is a part of the total reservoir capacity that serves for improving flow and for securing water taking in periods of drought.

Area of territory endangered by floods includes the area that is endangered by the high water. High water is 10 years old water (Q 10) and 100 years old water (Q 100). We give approximate figures.

Area of the territory protected against floods includes the area that would be flooded because of higher flows of the water in water-courses in case that the retentive capacities of reservoirs, adjustments to water-courses or preventive dikes were not built.

Production of drinking water includes total amount of drinking water produced in water-supply stations themselves under the administration of companies of Water Plants and Sewage and municipalities after adding an amount of drinking water taken from other waterworks organizations or from other water suppliers (legal persons) and after subtracting an amount of drinking water delivered free of charge to waterworks organizations (e. g. among units of Water Plants and Sewage companies).

Invoiced water includes the amount of drinking water sold to direct customers.

Non-invoiced water includes losses of the water in the pipe network, own water consumption or possible free water supplies, e.g. for fire protection purposes.

Sewage disposal plants are facilities purifying sewage water, applying mechanical and biological way of purification or the so-called third stage of purification applying mechanical and biological additional purification. Sewage disposal plants do not include facilities for rough pre-purification of sewage (sand-traps, oil-traps, etc.), septic tanks, cesspools and simple facilities that are not observed and served regularly.

Suspended solid pollutants are substances determined by water filtration and dehydration of the rest (on filter) at 105 ^{o}C to constant weight.

Oil pollutants are the substances extracted from water excluding polar substances that can be separated from the extract in a standard way.

Biochemical oxygen demand (BOD) is the volume of oxygen consumed in aerobe biochemical decomposition process of organic compounds present in the water for the period of 5 days at standard conditions.

Chemical oxygen demand (COD) is a consumption of oxygen (O_2) by dichromate method.

Source

Data on water management are obtained from the surveys realized by the Statistical Office of the SR and data on water quality are taken from the Slovak Hydrometeorological Institute and State Health Institute.

More information can be obtained in the publication Water Management and in the organizations mentioned above.

V.1 Agriculture

Methodological notes

Agriculture includes all legal entities (legal and natural persons) which are active in crop and livestock production, in related service activities and fish-hatcheries.

The basic statistical unit for the purposes of the statistics on soil fund and crop production, is considered as:

a) total of agricultural land with the area larger than 0,10 ha;
b) total of agricultural land with the area up to 0,10 ha
   – if the products from this land are usually sold
   – if there is a vineyard on the land with the area larger than 0,05 ha;
c) total of the forest land or ponds with the area larger then 0,10 ha if these cultures are not a part of the agricultural establishments under the point a).

Every breeder of farming animals who breeds them for sale or for next processing including agricultural enterprises and other breeders without agricultural land or with agricultural land up to 0,10 ha in area are basic statistical units for the purposes of the livestock production statistics.

Status of **soil fund** as of 1 January of the following year is given as the status as of end of the current year. All data on land are investigated as areas of individual kinds of lands. Total agricultural land of the area up to 0,10 ha is also included.

All recalculations concerning intensity of agricultural production take into account either agricultural or arable land belonging exclusively to agricultural establishments.

Summary data on **gross agricultural production** (see chapter I. Slovakia from 1960 to 1999) are for agriculture in total, i.e. including calculation for small enterprises and population. The structure of gross agricultural production is given for incorporated entrepreneurial entities employing 20 and more employees.

In **crop production** data on sown area and data on crops production are given for agriculture in total.

Production of agricultural crops represents a total crop of the given plant which was harvested under standard humidity by Slovak Technical Standards and purity without harvest losses including species of minor quality used for feeding (backgrown grain, small potatoes

etc.) excluding seedlings and saplings. Beet harvest is given without reduction for impurities. The crop of feed-stuffs is recalculated to the value of hay according to conversion coefficients. Vegetable production is represented by the total crop of vegetables also from repeated areas including forced early sorts.

Harvested areas of particular sorts of vegetables include also areas where vegetable has been sown or planted as a main crop as well as all resowings and reseedings including covered areas and home-garden areas.

The number of fruit trees includes all fruit trees regardless of age and shape namely bearing trees, newly planted ones or superannuated, non-bearing ones.

The surveying on balance of grains covers only the agricultural enterprises growing cereals. The receipt of cereals accounts own crop, purchase, imports and another receipts. The consumption of own seeds, sales of perquisites to their own members and employees, sales to the trading and processing organizations, exports, fodder consumption and others are included in expenditures.

Consumption of fertilisers is surveyed without private plot owners for the economic period, i. e., from 1 July of the current year until 30 June of the following year.

Crop production is surveyed by selected kinds given in the list of products and services in agriculture AGROPROD.

In the **animal production** cows, sows and ewes are the breeding ones that at least once farrowed (without sows excluded from breeding and included in feeding). Poultry involves hens, cocks, goose, ducks, drakes, turkey-hens, turkeys including young ones of these species.

Meat production includes the total volume of sales (by primary producers) of slaughtered cattle, calves, pigs, sheep and goats in live weight delivered to slaughter increased by other sales and self-sufficiency. Besides total sales, milk production includes self-sufficiency and also milk that has been sucked or fed by calves.

Fishing includes freshwater fish determined for consumption and market purposes.

Sales data cover sales of incorporated agricultural enterprises and self-employed farmers with statement duty. Data on sales of all products are surveyed for a calendar year. Sales of cow milk include also the sales of cream. Sales of consumer eggs include all hen eggs without eggs for hatching.

The **level of production** is given per average area of agricultural land and mid-year

population in the current year. Livestock is given per agricultural or arable land, respectively, as of Dec. 31 of the current year.

Oil plants group includes all oil plants except for flax and hemp seed. Group of total slaughtered animals includes the production of slaughtered cattle, calves, pigs, sheep, goats and horses.

Numbers of **machines and means of mechanization** are surveyed for all agricultural enterprises and organizations providing services to farmers without non-incorporated independent self-employed farmers. Recalculation of machines and means of mechanization per utilised area is given for the area of all agricultural enterprises. Grain, potato and beet harvesters are calculated per harvested area and potato planter per sown area.

Definitions

Agriculture land is sum of independent kinds of lands directly serving in agricultural production for crop production. It is a part of soil fund.

Arable land is created by lands for growing cereals, root-crops, industrial crops, vegetables and another agricultural crops according to the specified sown methods. There are included lands temporary overgrown with grass or used for growing of fodder lasting more years as well as hotbeds and hothouses if they are built up on arable land.

Degree of ploughing of land is expressed by the ratio of the arable land to the agricultural land.

Gross agricultural production is the sum of sales out of enterprise, sales within the enterprise and changes in stocks at the beginning and at the end of the year (Gross turnover method). It is calculated at natural units (pieces) and at constant prices of the year 1995 or at current prices.

Area sown refers to a spring productive area (i. e., arable land area, sowing area in orchards and gardens including home gardens and the area of grass lands and pasture lands temporarily ploughed for reclaiming), expected to bear a crop in the current year. The following kinds of areas belong here:

a) areas of winter wheat sown in autumn of the previous year and preserved until the spring sowing in the current year
b) areas of spring corn sown in spring of current year

c) areas of many years lasting crops sown in past years and preserved until the completion of sowing in the current year
d) areas that were not sown due to unfavourable climatic conditions as well as areas temporarily fallow.

Hectare yield refers to average yield from 1 hectare and it is calculated as a ratio of total yield of given crop and area on which the crop was gathered.

The average annual milk yield expresses the volume of milked and sucked milk per one cow. It is calculated for average number of cows per year excluding meat breed cows (without market milk production).

An average egg-laying per one hen expresses the number of totally annual laid eggs, recalculated per one hen.

Rearing of calves, pigs and lambs expresses the difference between live-birth and dead young (including all confiscation). Rearing of calves and pigs is calculated for an average number of cows or sows, rearing of lambs for the number of ewes by as of January 1 of the current year.

Loss-rate of calves and lambs is counted until the age of 3-months and of pigs until weaning.

Livestock unit is the weight of 500 kilograms for which individual farming animal species and their categories are recalculated.

Regular employees are those whose job in an agricultural enterprise is a single or a major activity and who have a labour contract (contract on labour conditions). Here also belong those crop production workers with whom a contract was made for a minimum of 150 working days in a calendar year. The days actually worked out and days considered to be as work days are being included in those 150 working days.

Source

Published data are results of the Statistical Office of the SR processing except data on soil fund taken from the Office of Geodesy, Cartography and Cataster of the SR, data on apiculture are taken from the branch report of the Ministry of Industry of the SR and from the Slovak Union of Apiarists and the Association of Apiarists of Slovakia. Data on the consumption of fertilizers were taken from the Central Control and Testing Agricultural Institute.

Further information can be obtained from publications Animal Production and Sales of Farming from Primary Production; Selected Economic Indicators and Employees in Agriculture; Census of Area Sown with Crops as of May 20, of Current Year; Final Data on Crops; Final Data on Harvest of Fruit and Vegetables; Register of Farm Animals as of December, 31; Machines and Equipment in Agriculture as of December, 31; Gross Turnover – Selected Indicators on Agriculture; Structure of Employees in Agriculture.

V.2 Forestry

Methodological notes

The branch of **forestry** includes basic data on structure of utilized forest land, basic data on labour in silviculture activities, on regeneration and protection of forests, basic data on logging activities and timber deliveries. The data are given for state forest enterprises, military forests, forests of industrial and farming companies, municipal forests and organizations covering private forests as well as land associations (land-registers, composesorates, cottar forests and other) non-incorporated in Business or Tradesmen Register.

Definitions

Utilized forest land is all land that is being actually managed. It includes timber land, i. e. land used directly for forest production, actually afforested or temporarily deforested with the intention of reforestation as well as forest-free area, i.e. temporarily deforested part of the forest land serving indirectly to forest management.

Land designed for afforestation comprises the whole area designed for afforestation including land taken over to be afforested (former non-forest – mainly agricultural – land). Unsuccessful afforestation increment comprises areas of unsuccessful plantations in observed and previous years.

Afforestation stands for land actually afforested by sowing and planting (including established plantations). It comprises areas afforested for the first time as well as enrichment planting recalculated per area of full afforestation.

Seed collection is given in terms of kg of pure seed. Recalculation of kg of pure seed is done by valid coefficients.

Production of plants includes the number of plants taken from forest tree nurseries for afforestation and sale purposes.

Forest tree nursery is land designed for the production of planting stock.

Cleaning is usually the first silviculture intervention in young immature stands.

Thinning includes mainly regulations of stand composition, shape tending and stand stabilisation.

Logging includes the value of logged mass of wood in thousand cubic meters i.b. that was received as a final assortment or as a green trunk including logged mass from so called „self-production“. The mass is included regardless of type of silviculture or logging interventions it was received from, including salvage felling.

Self-production stands for volume felled left to the subject who felled it for a fee to cover self-supplying of inhabitants with fuel wood.

Timber delivery comprises mass of wood (full-size timber, non full-size timber) in thousand cubic meters i. b. designed for a sale to domestic and foreign customers and delivered for own consumption regardless of delivery place.

Source

Published data on forest management is the result of the Statistical Office of the SR processing and it is completed from the materials of the Institute of Forest Management in Zvolen as well the Research Institute of Forestry in Zvolen.

More information can be obtained in the publication Forestry and in above mentioned organizations.

V.3 Industry

Methodological notes

Industry includes activities connected with extraction of minerals, manufacturing, production and distribution of electricity, gas and water. It is divided according to the Branch Classification of Economic Activities.

Industrial production index (IPI) is calculated according to the methodology valid in the European Union on the base of the Standard on Short-term Indicators. IPI calculation is based on the change of selected products volume and on the two-step weight system. The index expresses a change in industrial production in current year in comparison with base year. It is calculated from statistical survey results in reporting units (enterprises) with the main industrial activity and with 20 and more employees regardless of legal form and in the selected enterprises with non-industrial main activity or with number of employees up to 19.

Production of selected industrial commodities is given in the aggregation of products according to the list of industrial products PRODSLOV valid since 1998 and elaborated on the base of international classification of products PRODCOM (PRODuction COMmunautaire – Community production).

Receipts from industrial activity present the value of receipts for sales of own industrial products including receipts for sales of own products in own company store, own works and industrial services realized in the reference period for inland and foreign customers. VAT and excise tax are excluded.

Total receipts comprise value of sold products and services of own production as well as marketable goods determined for inland and foreign customers. It is presented without VAT and excise tax.

Definitions

Receipts from sales for export include the sale to a foreign customer that is realised by the manufacturing enterprise itself or by an intermediary organization. The sold products are transported directly from the store of the manufacturing enterprise abroad.

Industrial production index expresses the change of production volume given in physical terms.

Production of selected industrial commodities includes the products intended for sale outside the enterprise as well as those consumed for manufacturing purposes (i. e. intra-plant consumption) and for industrial services (i. e. adaptations, repairs, maintenance, installation, contract treatment) and they are intended for outside sale.

Monthly labour productivity based on receipts from industrial activity is expressed by volume of the receipts from industrial activity per one employee in industry per month.

Coefficient of the shift rate shows the ratio of total number of worked days by workers and number of worked days in the first shift.

Source

All published data is the result of the processing in the Statistical Office of the SR.

More detailed information can be obtained in monthly publications Selected Indicators of Industrial Organizations and Industrial Production Index, in quarterly publication Production of Selected Goods in Physical Terms and annual publications Results of Annual Surveys in Industry by Enterprises and Establishments and Yearbook of Industry.

Koeficient zmennosti	1,308	1,366	Shift rate
Podiel práce nadčas (%)	4,0	3,6	Share of overtime work (per cent)

V.4 Energy

Methodological notes

Data on energy sources has been taken from the producers, importers, exporters and fuel and energy traders. Data on use is obtained from statistical units consuming individual kinds of fuel and energy. Data on consumption of fuel, heat and electricity for products manufacture is obtained from statistical units producing individual kinds of products.

Definitions

Primary energy sources include natural resources (brown coal, lignite, crude oil, gas, heat and electricity) and they are modified by a balance of imports and exports and by drawing of supplies. They also include balance of imports and exports and drawing of the other resources such as hard coal, coke, brown-coal briquettes, oils, petrol, light and heavy fuel oils, kerosenes, coke-oven, gas, blast furnace gas and other solid, liquid and gaseous fuels.

The final consumption expresses the consumption of fuels and energy before their input to appliances where they are used for final utility effect, so no other sort of power (except for secondary energy sources) arises.

Secondary energy sources are such sources, whose utilization is technically possible and they arise as:

– result of fuel consumption and energy used in technological or energy process
– an technological waste utilizable in energetics.

Specific consumption express the amount of fuel, heat, or electricity consumed per unit. They are calculated according to the following formula:

$$\text{Specific consumption} = \frac{\text{Total consumption per product}}{\text{Production}}$$

Input is the amount of fuel (energy) entering directly the energy process with the intention of its upgrading (e.g. production of coke, production of liquid fuels from crude oil, production of heat and electricity).

Operating consumption is fuel (energy) consumption for operation of energy processes for fuel improvement as well as fuel (energy) consumption for extraction and preparation of fuels.

Consumption of fuels and energy is consumption including charging and operational consumption in the process of generation of electricity and production of heat as well as in the fuel improvement processes. Electricity consumption also includes consumption of energy for pumping of water in hydro-electric power plants.

Source

All published data is the result of the Statistical Office of the SR processing.

More information can be found in quarterly publication Selected Indicators on Fuels and Energy Consumption a in annual publication Energetics.

V.5 Construction

Methodological notes

The production of the **construction branch** covers construction works realized on the territory of the Slovak Republic and abroad by supplier construction organizations with the major activity in the field of building and construction registered in the Slovak Republic (including tradesmen) and construction capacities of non-construction organizations. Predominating building and construction activity of the organization is determined by its registered appurtenance to section 45 of Branch Classification of Economic Activities (NACE).

Data on contractually agreed construction production in new construction is structured into particular branches of construction types by the Standard Classification of Construction Types (JKSO). Branches of construction types are based on identical or at least similar economic features from the point of view of the purpose they serve, use and production (i.e., buildings serve roughly to the same purposes, are similar from the point of view of construction method, used material, technology, etc.).

Data is presented in methodology and organization structure of the current year, at current prices and constant prices converted on the average year 1995 level.

Definitions

Construction production carried out by own employees comprises the value of construction production realized by employees included in the registered number of employees of the given construction enterprise as well as by persons working with the enterprise upon contract (including productive work of apprentices). Included is also the production within own capital construction as well as production for other suppliers of construction production including production produced abroad.

Contractually agreed construction production is the value of construction production based on a delivery contract for a customer. It is the sum of own performances from construction activity including the production carried out by sub-contractors.

Construction production in **new construction, modernisation and reconstruction** is the

value of construction inland production connected with acquisition of the new tangible fixed assets and with rebuilding, extension or reconstruction of the existing ones.

Maintenance and repairs is the value of works realized on existing buildings or construction parts of tangible fixed assets removing partial depreciation or damage by repairs to make them functional.

Other construction production comprises all production that cannot be included in new construction, reconstruction, modernization and repairs. It includes, for example, construction work for geological surveys, removing of mined earth carried out by contractors and demolition work (in the site where another construction will not be erected instead), etc.

Completed dwellings represents the number of completed dwellings built by suppliers in the new buildings used for residential purposes by used material of vertical load-bearing construction. Completed dwellings in family houses realized „on key“ (fully completed dwellings construction) are also included in this number.

Workers carrying out construction work comprise employees (workers) included in groups 7, 8, 9 of the Classification of Occupations who are involved fully or mainly in construction activities of the organization.

Average monthly wage is calculated from the total wages (without other personnel costs).

Labour productivity is expressed as the amount of the construction production (in thousand SKK) per one employee or worker engaged in construction work.

V.6 Transport, Post and Telecommunications

Methodological notes

The branch of transport, post and telecommunication includes entrepreneurial subjects providing services in the fields of public and non-public transport, post and telecommunications.

Public transport includes enterprises with transport as prevailing activity carrying out the inland or international transport of goods and passengers including supporting and auxiliary activities in the transport (excluding travel agencies).

Data on public transport are for all incorporated transport enterprises and tradesmen enrolled in Tradesmen Register.

Non-public transport includes incorporated enterprises, which are classified by their main activity into branches different from transport, realizing transport activities for internal or external needs. Transport activity for internal needs includes the transport of goods for own production. Transport activity for external needs is paid transport service according to the legal relationship based on the agreement between transport operator and natural or legal persons whom the transport of goods, another things as well as passengers will be realized for.

Transport of goods given in tons and performances given in ton-kilometres are surveyed according to the Classification of Goods in Transport NST/R which contains 24 commodity groups.

Roads and motorways are divided for class I., II. and III. roads and motorways.

Local communications include data for local roads for class I. to IV. and they are surveyed twice within five years.

City transport is ensured by the branches of the City Transport Company in Bratislava, Košice, Prešov and Žilina. In other towns of the Slovak Republic the city transport is carried out by companies of the road passenger transport.

Air transport is presented for enterprises performing air transport regardless their prevailing activity given in the Business Register.

The branch of **post and telecommunications** includes incorporated enterprises that provide postal service, financial service and operation of the telephone, radiotelephone,

telegraph, telex and documentation service. Data are presented for state post, telecommunication services in fixed and mobile telephone network, technical equipment within telecommunication and radiocommunication service.

Definitions

Roads and motorways are connected line structure serving for transport connection between residence units and centres of inland or international value. Cross-roads, resting places, bridges and tunnels are included.

Local communications include all accessible and used streets, roads and public places excluded from roads and motorways network lying in built-up municipal areas or in areas intended to be built-up.

Transport of goods express real mass of transported goods (load) realized by means of particular kind of transport by the transit line. They are surveyed according to the commodity groups.

Performances in ton-kilometres present value of total transported performances in ton-kilometres carried out by freight transport means of particular kind of transport. They are calculated individually (tons x kilometres) for every drive individualy.

Net ton-kilometres in railway transport express a net transport performances of locomotives by actually covered distance.

Gross ton-kilometres of traction in railway transport represent product of gross weight of train and train-kilometres in goods resp. passengers transport.

Loading express a mass of loaded goods intended for inland transport or exports. Loading as activity is the beginning of transport process realized by the agreement.

Average static load in railway transport is a ratio of total loading in tons and number of loaded train units.

Transported passengers present the total number of transported persons in inland or international transport.

Passenger-kilometres express the value of transport performances in passenger transport. One passenger-kilometre is equal to transport of one person per 1 kilometre distance.

Seat-kilometres express carriage capacity of city transport. This indicator is a product of

driven vehicle-kilometres and static vehicles capacity rate for every drive individually.

Post office is the independent postal establishment on determined place carrying out receiving and delivering service. Some post offices also provide clearing service.

Posted mails are all kind of items containing paper documents or tiny objects sent by post offices or by mail boxes.

Deposits of financial services includes deposits sent by post cheques, international cheques, deposits for the Post Bank, telecommunication remittances, coupons and others.

Withdrawals of financial services express the number of paid inland and international post cheques, withdrawals of the Post Bank, withdrawals of pensions as well lotteries praises.

Main telephone stations refer to the substations connected by individual or common central office-line or by transmitting devises into the local telephone exchange and they have unambiguous address.

Mobile telephones are substations of public radiotelephone network (NMT – Nordic Mobile Telephone, GSM – Global System of Mobile Communication), which call number is registered in the organizations which operate public radiotelephone network NMT, GSM.

Digital exchanges are devices with electronic structural members, digital changing of signals and automatic program controlled connecting processes.

Source

All published data are the result of the statistical surveys of the Statistical Office of the SR, except data on the length of roads, number of motor vehicles and data on post, which are taken from sectors informative systems of the Ministry of Transport, Posts and Telecommunications of the SR and from the Ministry of Interior of the SR.

More information can be obtained in quarterly publication Results of Quarterly Surveys for Enterprises of Transport, Posts and Telecommunications and in Yearbook of Transport.

V.7 Internal Trade

Methodological notes

The branch of **internal trade** includes entrepreneurial subjects selling goods and own products to final consumers (retail trade) or managing a next sale or manufacturing (wholesale) or eventually providing wholesale on a fee or contract basis, services of public catering or other supplementary services (e.g., transport of purchased consumer goods, repairs of consumer goods, accommodation services, etc.). Hotels, restaurants and travel agencies receipts are also included in retail trade receipts.

Retail trade includes entrepreneurial subjects with the following prevailing activity:

– sale, maintenance and repair of motor vehicles and motorcycles; retail trade of automotive fuels,
– retail trade except motor vehicles and motorcycles; repair of consumer goods,
– hotels and restaurants,
– travel agency activities.

Data on total receipts **for retail activity** in the SR consists of data on trade enterprises as well as data on retail activity of non-trade enterprises. Retail trade data classified by economic activities and by size structure of enterprises is surveyed only for trade enterprises.

Wholesale includes subjects with the following activity:

– wholesale and wholesale on fee or contract basis except motor vehicles and motorcycles.

Detailed classification of retail activity and wholesale activity is based on the Branch Classification of Economic Activities.

Data on internal trade is surveyed for incorporated legal persons and for natural persons running business on the base of the Tradesmen Licence.

Data on retail network and on network of outlet centres of catering is surveyed for incorporated legal persons with 20 and more employees.

1997 and 1998 data is adjusted against the data published in the Statistical Yearbook of the SR 1999 on the basis of the price index revision.

Definitions

Receipts in retail trade are the receipts from sales of goods, own products and services at realization prices (i. e. including value added tax) realized mainly in units of retail network (i. e. in shops, stands, department stores, petrol stations) and as consignment sale, etc. They are divided in two groups: foodstuff goods receipts and non-foodstuff good receipts. Foodstuff good receipts include receipts from selling foodstuffs in retail and in public catering facilities. Non-foodstuff good receipts include receipts from selling non-foodstuff goods, services, repairs and works made to order.

Published total **receipts for retail activity in the SR** by structure and by kind of property are given for the receipts for retail activity of trade and non-trade enterprises.

Wholesale receipts are the receipts for the sale of goods from wholesale and purchasing stores to different customers for next sale or for manufacturing. Receipts are expressed at realization prices (including value added tax). They include commission for business procurement.

Retail network consists of outlets in which retail activity is carried out. Units of retail network are classified into assortment types by receipts in particular assortment.

Foodstuff shops are those in which the share of foodstuffs in the total turnover is 80 % and more. Non-foodstuff shops sell a general assortment of non-foodstuff goods. General shops sell mainly foodstuffs; from industrial ware mainly that which is often demanded. Department stores are units with a locally concentrated set of selling departments under joint operation. Minimal selling area is set up (e. g., for full-assortment department store it is 1,500 m^2). Immobile stands are places of business with a separate place for goods and shop-assistant but not for customers. Petrol stations and garages have no selling area too. Units for sales of fuels and construction materials don't report their selling area if they have no sales room and they sell directly on storage area.

The **network of outlet centres of catering** consists of centres of catering providing catering services, social and entertaining activities as well as supplementary catering services. According to the period of operation the outlet centres are divided into year-round and seasonal ones. A seasonal unit operates less than 9 months during the year.

Methodological notes

Foreign trade includes activities of all entrepreneurial entities, legal and natural persons involved in exports and imports in the form of merchandise. That foreign-trade activity is regulated by the Law of the National Council of the Slovak Republic No 180/1996 Collection – the so called Customs Law and by the Decree of the Ministry of Finance of the Slovak Republic No 167/1997 Collection on contents, form, requirements of customs declaration and on way of keeping customs statistics.

Customs statistics includes information on goods which were imported into the Slovak Republic and released into free circulation regime or into regime with economic impact i.e. into the regime of the inward processing in the suspension system or drawback system, into the temporary use regime and into the regime of conversion under the customs supervision. In case of exports all goods exported from the Slovak Republic for the purpose of permanent keeping or processing abroad, as well as goods allocated in customs store or in duty free area, are included.

Concerning imports, the processed information relates to the goods after their release into the proposed regime, usually by inland customs office. In such cases a time delay occurs between the time when the goods crosses the border of the Slovak Republic and time of final processing because of the fact, that according to § 79 of Law No 180/1996 Collection a customs office releases the goods into the proposed regime in case that a customs debt has been paid or secured.

A decisive moment for statistical processing of the data on exported goods is confirmation that the goods crossed the border by border customs-office.

Data is collected and processed by Combined Nomenclature, which is given by Customs Tariff. The nomenclature is full compatible with the nomenclature used by the European Union. Data are also published according to the Standard International Trade Classification, Revision 3, (SITC, Rev. 3), issued by the Statistical Commission of the United Nations in 1996.

In compliance with international methodology of foreign trade data reporting, the data is published exclusively by **country of origin and country of destination**. Value of imports is

expressed in **trade parity** (OP, FOB) and value of exports is given in **franco-price** – Slovak border (FCO, FOB).

Export and import figures are the results of the final statistical processing of foreign trade data for the reference period. The data before the year 1997 are not comparable with those after 1997 in consequence of methodological changes introduced in 1997.

Definitions

Country of origin is the country, where goods were completely produced or obtained, or where goods were substantially transformed.

Country of destination is the country, where goods will be used, consumed or processed, or it is the last known country, where goods will be transported.

Trade parity (OP, FOB) is invoiced price of the goods which is neither increased nor decreased by direct trade costs abroad.

Concerning exports **franco-price** (FCO, FOB) is invoiced price of the goods decreased by direct trade costs abroad.

Direct trade costs abroad are the costs of domestic suppliers or purchasers for delivery or receiving of goods abroad, e.g. costs for transport, insurance and storage of goods.

Economical associations consist of the next countries:

CEFTA (Central European Free Trade Agreement): Bulgaria, Czech Republic, Hungary, Poland, Romania, Slovakia and Slovenia;

EU (European Union): Belgium, Denmark, Finland, France, Greece, Netherlands, Ireland, Luxembourg, Germany, Portugal, Austria, United Kingdom, Spain, Sweden, Italy;

EFTA (European Free Trade Association): Iceland, Liechtenstein, Norway, Switzerland;

OECD (Organization for Economic Co-operation and Development): EU and EFTA member countries, Australia, Czech Republic, Japan, Republic of Korea, Canada, Hungary, Mexico, New Zealand, Poland, United States, Turkey.

Source

Collection of the data on the goods, to which were ensured certificates by the custom bodies on the basis of necessary documents, their checking and registration in accordance with the

legal regulation mentioned above are done by custom bodies. The Custom Directorate of the Slovak Republic supplies the data to the Statistical Office of the Slovak Republic, which is responsible for foreign trade data processing and publishing.

More detailed information on foreign trade can be obtained in monthly publication Foreign Trade in the Slovak Republic and in the yearbook Foreign Trade of the Slovak Republic.

V.9 Selected Market Services

Methodological notes

Area of **selected market services** covers those organizations and other entrepreneurial entities that provide paid services to the population mainly in the field of real property, renting of machines and devices, computer and related services, other business services (such as legal, tax and account consultancy, architectural design and engineering, technical testing and analyses, advertising, labour recruitment, searching and safeguarding services, waste treatment and other various business services), education, waste disposal, recreation, cultural and sport activities, and other public and personal services (such as laundry and dry-cleaning, hairstyling and cosmetic care, funeral services, body relaxation activities and other services prevailingly of personal character).

Data on selected market services includes data for incorporated legal persons and data for natural persons running business based on the tradesmen licence.

Receipts for selected market services are surveyed including VAT and are divided according to the Branch Classification of Economic Activities.

Till 1998 this area covered also organizations providing non-market services (for instance some educational and health organizations) if 50 % and more of their costs were covered by revenues. Since 1999 the activities in health sector have not been surveyed and in educational sector only commercial activities are surveyed.

Definitions

Receipts for selected market services express the volume of realized services for market services, commercial activities in branch of education and for public, social and personal services.

Source

All published data is the result of the processing in the Statistical Office of the SR.

More information can be obtained in quarterly publication Basic Indicators for Selected Market Services.

V.9–1. Základné ukazovatele vybraných trhových služieb

V.10 Tourism

Methodological notes

The activities of accommodation establishments, services of travel agencies and foreign tourism are surveyed within the framework of **tourism**.

Foreign visitors accommodated in the tourism establishments are surveyed by the country of residence.

Data on accommodation and tourist services have been obtained from incorporated statistical units and from natural persons entered in the Tradesmen Register.

Names of the countries are used according to the ISO standard No 3166-93.

Definitions

Accommodation establishments of tourism are those which provide temporary accommodation for visitors regularly or occasionally. They include hotels, boatels, motels, inns with accommodation services, tourist hostels, chalet camps, camping sites, other collective accommodations and accommodation in private. Only complete cottage colonies and camping sites are included in accommodation establishments but individual chalets, cabins or tents of provider are excluded.

Beds in accommodation facilities of tourism include all beds determined for overnight lodging of visitors including occasional beds. The beds intended for the owner and for stuff are excluded.

Places on free area are basic camp units for tents, tent and passenger car, caravan, motor caravan multiplied by 3,5. Tree or four people can be accommodated per one camp unit.

A visitor in accommodation establishment of tourism is a person (except stuff and owner) using services of temporary accommodation establishment regardless of country of permanent residence. Children are also included in the number of visitors. The visitor uses accommodation services for the reason of holiday, business trip, participation in sport events, training, courses, symposium, stay in spa, visit of friends or relatives, participation in church events, etc. These accommodation establishments include also accommodation of children in

out-door schooling and in summer and winter holiday camps for children. Domestic and foreign employees working in Slovakia who use the accommodation establishment temporally as a hostel are not considered to be visitors. The period of temporary accommodation should not exceed 1 year.

Receipts for accommodation services include the receipts with value added tax obtained from overnight stays of visitors (domestic and foreign), receipts from setting of the tent, motor vehicle or caravan, connecting to electric network, etc., (regardless of the way of the payments for accommodation). Receipts from services relating to accommodation (e.g. washing and cleaning of laundry, using of bathroom, etc.) are also included. Receipts from services of personal character e.g. cosmetics, hairdresser's, manicure and chiropody services are excluded.

Foreign visitor accommodated in an accommodation establishment is a person who visits the country and is not the resident of the country. Children are also included in the number of visitors. Foreign visitor uses accommodation services for the reason of holiday, business trip, participation in sport events, training, courses, symposium, stay in spa, visit of friends or relatives, participation in church events, etc. Exceptions are those people who are coming to do a job, to prepare themselves for a profession (a long-term study) or to become a resident of the country. Members of diplomatic corps and armed forces being on duty in the country are also excluded.

Participant in the active tourism is foreign visitor using services of tourism during travelling in the Slovak Republic and he is not the resident of the Slovak Republic.

Participant in the passive tourism is the Slovak citizen using services of tourism during travelling abroad.

Participant in the active or passive foreign tourism is a person travelling for the reason of holiday, business trip, participation in sport events, training, courses, symposium, stay in spa, visit of friends or relatives, participation in church events, etc. Exceptions are those people who are coming to do a job, to prepare themselves for a profession (a long-term study) or to become a resident of the country. Members of diplomatic corps and armed forces being on duty in the country are also excluded. Duration of a temporary stay of participant in the active or passive foreign tourism must not be longer than 1 year.

Arrivals of foreign visitors into the SR include numbers of all foreigners who entered the Slovak Republic for any reason.

Travels abroad of the Slovak citizens include numbers of all travels abroad for any reason.

Source

All published data is the result of the processing in the Statistical Office of the SR excluding data on arrivals of foreign visitors to Slovakia and on travel abroad of Slovak citizens by the sections of borders and airports which are processed from the statistical information received from the border crossing points and airports of the Slovak Republic and Department of Border and Alien Police of the Presidium of Police.

More information can be obtained from quarterly publication Basic Indicator for Accommodation Establishments of Tourism and in annual publications Capacity and Performances of Accommodation Establishments of Tourism in Slovakia Managed by Private Entrepreneurs not Enrolled in Business Register; Tourism Organized by Travel Agencies in the SR.

VI.1 Income, Expenditure and Consumption of Households

Methodological notes

Structure of income and expenditure of households is surveyed within the framework of statistics on household budget realized by the Statistical Office of the SR regularly every year. It is a sample survey where a purpose-made quota selection is used in order to create the sample. Quota criteria are the following:

- region (8 groups);
- social group of households which is assigned by the social status of the head of household (5 groups);
- net money income per capita and month (2 groups)
- number of dependent children in the households where the head is an economically active person (4 groups), number of members in pensioner's households (2 groups) and sex in one-member pensioner's households.

Frequency of individual groups of households by the first two criteria was fixed on the basis of the last Census results (1991). Frequency by the last two characteristics is fixed according to the results of sample survey on money income of households (Microcensus 1997). In 1999 reporting network was created by 1 640 individual households.

Reporting unit according to the family budgets surveys is managing household together, i.e. group of people who permanently occupy together one dwelling and reimburse together the household expenditure (food, current necessary household expenditure, maintenance of the dwelling, etc.) Member of household can also be a person who is not relative with other members of household but he permanently shares one dwelling and all household expenditures with them. Household willingly supplies information about all its income and expenditure of all of households members.

Structure of expenditure is given by the Classification of Individual Consumption By Purpose – COICOP from year 1997.

Gross and net money income and expenditure on households in total are estimates for average household recalculated from the values covering households of employees, i.e. persons having the status of an employee (except for agriculture), farmers (manual working

members of farming co-operatives including self-employed farmers), households of pensioners without an economically active member while one of the household members can work one month per year at most as well as self-employers (except for agriculture) by using the weighted arithmetical mean.

In 1999 the methodology for calculation of gross and net money income and expenditure was changed. Withdrawn savings and deposits are not included in the indicators. Data for years 1995 – 1998 are recalculated by new methodology from year 1999.

Data on **consumption of foodstuff and alcoholic beverages per capita** is calculated by using the balance method. Consumption is computed per mid-year population. Main data inputs used for the calculation is data on domestic production, imports, exports, initial and final stock. Calculation of individual data on consumption of foodstuff is based on statistical information of the Statistical Office of the SR and the Ministry of Agriculture of the SR as well as information from some food industry unions.

Daily consumption of energy and the most important nutritive ration per 1 capita is calculated on the base of food consumption data, which was calculated by balance method after excluding consumption in food industry for further processing and from the nutritive values of foodstuffs given in the tables. The result is expressed in gross terms, i. e . including losses (as purchased).

Meat and meat products consumption is given in terms of carcass weight including entrails and consist of beef, pork, veal, poultry, mutton, horse, goat, rabbit and venison meat.

Fats total are expressed in terms of net fat.

Vegetable, vegetable products, fruits and fruits products are expressed in terms of fresh product.

Definition

Gross money income of households represents the total sum of money received by any member of a household. It is the sum of the money income from employment (from wages and compensations for work activity in non-agricultural and agricultural branches from employer resp. co-operatives), financial amounts assigned by self-employer from his/her business income for the needs of the household, social income, financial givings, compensations from insurance companies, gains from lotteries, withdrawals of loans and the like. Gross money income data do not include withdrawals of own savings contrary to previous years.

Income from the property of households is created by the financial amounts from bond, share and coupon dividends, from sales of farming products, from real-estate lease, etc.

Net money income of households consists of:

- net earnings, i.e. income from employment without income tax and compulsory contributions to the Social Insurance Company, health insurance companies and to the National Labour Office;
- part of income from private business running used by an entrepreneur for household providing;
- social income, i. e. old-age pensions security benefits, sickness insurance benefits, state social benefits, social aid benefits and unemployment allowance;
- other income, i. e. income from property, income from institutions and income from private persons, income from sales of farming products and income from abroad and withdrawn new loans.

Contrary to previous year the income do not include neither the balance of withdrawn loans and paid-up loans (loans in total are included in the other income) nor on balance of withdrawn savings and deposits (withdrawn savings in total are surveyed individually).

Gross money expenditure of households is the sum of financial amounts spent on purchase of goods and services including all types of insurance (consumption expenditure) and of transfer of all payments (other expenditure) including income tax and loans payments. Contrary to previous years the consumption expenditure does not contain under the item „miscellaneous goods and services“ expenditure of households on compulsory personal insurance, i. e. contributions to the Social Insurance Company, health insurance companies and to the National Labour Office (they are involved in the item „other expenditure“) and „other expenditure“ does not include the item „savings“ (they are surveyed in the individual item „deposits“).

Net money expenditure of households is recalculated as the sum of expenditures on consumer goods and services and other net expenditure. Income tax, compulsory contributions to Social Insurance Company, health insurance companies and to the National Labour Office are excluded. Contrary to previous years the indicator does not cover balance of paid-up and withdrawn loans (the sum of loans payments is involved in other expenditures) neither balance of deposits and withdrawn savings (deposits in total are surveyed individually).

The average consumption of selected kind of foodstuff and alcoholic beverages is

total amount of the commodity available in the country as human food during given year per capita. The consumption of surveyed kinds of food also involves the consumption in food industry for further processing (meat for production of smoked products, sugar for confectionery production, e. g.).

Source

Family budgets data is the result of the processing realized by the Statistical Office of the SR. More information is available in the publication Structure, Income and Expenditure of Households and Income, Expenditure and Consumption of Households.

Food consumption and its nutritive evaluation was processed by the Statistical Office of the SR. Data on nutritive value of consumption for 1998 was worked out in collaboration with the Research Food Institute in Bratislava.

Next information can be found in annual publications Food Consumption and Nutritional Evaluation of Food Consumption.

Methodological notes

According to the Law on the System of **primary and secondary schools** No 29/1984 Digest (Law on Education) in the wording of later regulation, the system of primary and secondary schools consists of primary school, primary school of arts, apprentice training centre, secondary vocational apprentice training centre, grammar school, secondary vocational school and special schools. **Educational facilities** (Law No 279/1993 on the Educational Facilities) as well as **institutions of higher education** (Law No 172/1990 in the last wording) are also the part of the educational system.

The school years presented in the tables are indicated by the beginning of the school year, e.g. the year 1999 refers to the school year 1999/2000.

Data concerning secondary schools and institutions of higher education do not cover the schools of the Ministry of Defence of the SR and Ministry of Interior of the SR. The figures on higher education are inclusive of civil students of the military universities.

Schools where upbringing and education is carried out in the language of the minority in addition to the Slovak language are reported as the schools with combined teaching language which means that in such schools there are classes with the Slovak teaching language and classes with the minority teaching language established.

Internal teachers including school directors are included in the number of teachers except secondary vocational apprentice training centres where are included only internal teachers.

Shift-lessons are related to the lessons of pupils and classes who have not separate classroom and therefore the lesson are performed also in the second shift.

Definitions

Special schools provide upbringing and education through the pedagogical and educational method for mentally or physically handicapped pupils, pupils with impaired senses or speech, pupils with more disabilities, pupils with trouble behaviour as well as ill and weak pupils in health establishments. Data on special kindergartens, special primary, auxiliary and

special secondary schools and schools for handicapped children are included in the data for special schools.

Source

Data source is created from the processing of sector survey realized by the Institute of Information and Prognoses of Education, excluding the financial indicators which are the result of processing by the Statistical Office of the SR, the Institute of Information and Prognoses of Education and the Ministry of Finance of the SR.

More information can be obtained in annual publications of the Statistical Office of the SR Basic Data on Schools and School Establishments in the SR and Selected Indicators of Non-market Services or from the Institute of Information and Prognoses of Education.

Methodological notes

Data on **health care** is summarily published for the branches of Ministry of Health of the SR, Ministry of Defence of the SR, Ministry of Interior of the SR, Ministry of Justice of the SR, Railway Health Service excluding the data on balneological institutes and bed fund in hospitals, which are presented only for the Ministry of Health of the SR. The group of health establishments-hospitals consists of teaching faculty hospitals, hospitals with policlinics, specialized hospitals and psychiatric hospitals. Special therapeutical institutes include treatment centres for long-staying patients, tuberculosis and respiratory diseases sanatorias, psychiatric treatment centres, rehabilitation, endocrinology and geriatrics institutes, institutes for drug addicted patients, convalescent homes, sanatorias, research and development institutes and other in-patient institutes. Balneological establishments comprise balneological policlinics and balneological institutes. The number of state physicians consists of number physicians in health establishments and number of physicians working in the Faculty of Medicine of Comenius University.

Data on **drugs consumption** is obtained from individual pharmacies. Drugs consumption is surveyed by drugs categories, producers and it is given in number of consumed packs and financial value.

Expenditure paid by health insurance companies is processed by statistical survey on health insurance companies. More information is given in chapter II. Finance. Health expenditure paid by citizenship is obtained by the sample survey in households.

Data on **infectious diseases** is processed according to the compulsory announcements. There are only newly notified cases presented. Newly notified cases of tuberculosis are surveyed including relapses.

Average **number of persons covered by health insurance** comprises the insured employees, members of manufacturing and farming co-operatives, self-employed persons – artists and other (scientific workers, journalists and the like). Persons on maternity leave and additional maternity leave, persons on compulsory military service and prisoners placed in reformatory and reclamation facilities are not included in the average number of persons

covered by health insurance. The sample of 20 per cent of all terminated cases of disability to work is included in the statistical processing of the terminated cases of disability to work.

Definitions

Physician's post is an indicator of rate of providing health service in particular branch and particular area. It is determined by the number of contract duty hours of physicians where 42,5 working hours per week or 36 working hours per week in dangerous work-places, respectively, are considered as one physicians' post according to the rules. Partial or additional duties are converted to the whole physicians' posts.

Public pharmacy provides pharmacy care for public including of individually prepared drugs. In the framework of pharmacy care a pharmacy provides drugs and prepares, checks, stores, gets out and sells drugs, gives special information about drugs and consultation on determination and monitoring of therapeutic method.

Average price of drug per pack is defined as a ratio of value and number of packs of consumed drugs. The value of consumed drugs is expressed in Slovak crowns and for its calculation is used maximal prise determined by the Ministry of Finance of the SR in the period of drug sale.

Expenditure paid by health insurance companies is payment of health insurance companies for health care provided to their insured in accordance with the valid Therapeutic Regulation.

Expenditure paid by citizenship includes the expenditure of population for health and pharmaceutical products, therapeutic devices and for out-patients care and hospitals health services.

Average duration of disability to work is the number of days of disability to work per one case.

Average percentage of disability to work per year is calculated as a ratio of calendar days of disability to work due to illness and injury and average number of employees covered by health insurance scheme, multiplied by the number of calendar days of the year.

Source

Data is obtained from processing of statistical surveys of the Ministry of Health of the SR and from the processing of the State Institute for Control of Drugs (drugs consumption). There are also used the administrative sources of following organizations: Ministry of Defence of the SR, Ministry of Interior of the SR, Ministry of Justice of the SR, Ministry of Health of the SR, Railway Health Service, Faculty of Medicine of Comenius University and State Health Institute (infectious diseases).

Figures on disability to work due to disease and injury and figures on expenditure in health sphere paid by citizens and health insurance companies are taken from the processing of the Statistical Office of the SR. The number of private physicians are obtained from the Register of Organizations kept at the Statistical Office of the SR.

More information can be found in the half-year publication Disability to Work Due to Disease and Injury and in the following annual publications Selected Indicators on Health Care; Selected Indicators on Health Insurance Companies, the Social Insurance Company and the National Labour Office and Disability to Work Due to Disease and Injury or in the ministries mentioned above and other institutes.

Methodological notes

Social security consists of the old-age insurance, sickness insurance, state social benefits and social aid.

The pension security is comprised of the old-age insurance, insurance in invalidity and insurance in case of missing breadwinner. The old-age pension security covers mainly employees, members of farming co-operatives, members of manufacturing co-operatives and self-employers.

The pension security includes an old-age pension (full or shared), invalidity pension (full or partial), widow's, widower's, orphan's pensions, long-term service pensions and pensions declared before January 1, 1957. Data on average level of pensions comprises also reduced pensions received in parallel with widow's pensions. Since 1994 wife's pension, social pension, increase of pension in case of disability and increase of pension in case of sole source of income are state benefits refunded by government.

Benefits of **sickness insurance** include four system benefits: sickness insurance, family member attendance allowance, maternity financial and equalizing pregnancy and maternity allowance. In full extent these benefits are granted to employees and members of farming and manufacturing co-operatives. Self-employers are not entitled to get a family member attendance allowance, equalizing pregnancy and maternity allowance, unemployed are not entitled to get a sickness insurance.

Since January 1, 1995 **state social benefits** such as children and parental allowance and former social security for families of those on military service (until Dec. 31, 1994 shown separately) have been excluded from sickness insurance. The benefits of former social security for families of those on military service consist of the subsistence contribution, housing contribution and compensation for earnings during military service and civilian service. Non-system sickness insurance benefits refunded by government include health resonance care including transport.

Since January 1, 1999 funeral allowance and child-birth allowance have been transformed from sickness insurance benefits refunded by government to state social benefits and foster

parent remuneration have been transformed from benefits of social care to state social benefits as well.

There have been changes in the branch of the social care resulting from the transformation of social security. According to the Law No 195/1998 on Social Aid the system change occurs in the branch of benefits granting to persons in need. Allocated benefits of social care addressed to different groups of persons in need were transformed to the only benefit of social assistance.

Services and benefits of social assistance are given to the persons for reducing and getting over material or social need with their active participation.

The increasing of nursing service employees is caused by new methodology of employees surveying in accordance with legal status change. According to the Law No 195/1998 on Social Aid the activity of voluntary workers of nursing service was cancelled. Nursing service is only realized by employees with labour relation or persons working upon contract according to the Labour Code. The number of employees shown in the table is recalculated on full-time job and voluntary nurses are not given.

Institutional care is provided in the institutions of social services according to the Law No 195/1998 on Social Aid. In 1999 the indicator „Institutions for youth“ includes the data on children's homes according to the Law No 222/96 on Organization of Local Government Administration.

Definitions

Old-age pension is the fundamental social security. Citizens qualify for an old-age pension after a minimum 25 years of employment and reaching a determined age limit (depending on job category: 55 – 60 years for men, for women 53 – 57 years also on the number of children raised).

Invalidity pension is allocated for citizen who is suffering from a long-term adverse state of health and meets the conditions for allocation of invalidity pension. In case of invalidity caused by work injury, the condition for the required number of years in employment is always considered fulfilled.

Orphan pension benefit is allocated to the dependent children due to death of a parent or adoptive parent. Full orphan benefit is allocated to children whose parents (or adoptive parents) both died. These benefits do not depend on employment duration.

Widow's pension is allocated as the partial replacement of deceased husband's income.

Widower's pension is allocated as the partial replacement of deceased wife's income during care for at least one dependent child.

Wife's pension is the pension security benefit refunded by government available to married women who are fully disabled or have reached 65 years of age but who do not qualify for benefits based on their own pension schemes and earn no income.

Social pension is allocated to persons without subsistence who do not qualify for pension.

Sickness benefits temporary compensate person for loss of income due to sickness or accident.

Family member attendance allowance is claimed when caring for a sick child under the age of 10 or caring for another sick member of the family when the provision of such care by another person is necessary. The rate of allowance is identical to those of sickness benefits.

Maternity financial allowance compensates woman for loss of income during last period of pregnancy and 28 weeks after delivery. It is paid 37 week in case of an employee who is single or who has given to two or more children.

Equalizing pregnancy and maternity allowance is paid during pregnancy and until the end of the nine month from delivery to a woman who is transferred to a different job because her original work was dangerous or threatened her pregnancy or maternity.

Children's allowance is given to breadwinner of dependent children in different amount by the children age and family income according to the law.

Parental allowance is repeated benefit entitled to the parent or person for permanent personal and proper care of at least one child up to the age of 3 years or up to the age of 7 years for child recognised as suffering from long-term severe health impairment.

Child-birth allowance is a single benefit given to the mother who gave birth to the child or is given to the father of the child or to the another person meeting the conditions according to the law.

Foster parent remuneration is a single or repeated benefits paid to the children in foster-age.

Funeral allowance is a single benefit given as the partial replacement of expenditure for the funeral of a person under the social security.

Health resonance is a benefit given for the persons under the social security and for their family members, whose health state gives reason for its allocation.

Increase of pension in case of disability is the allowance for replacement of increased costs relating to the need of serving and taking care of him/her by another person.

Increase of pensions in case of sole source of income is the state benefit of pension security granted in case that, old-age, invalidity, widow's, widower's or full orphan's pension is the only income source and do not reached 1,1 multiple of statutory minimum.

Benefit of social assistance is a single or repeated benefit allocated to the person in material need to provide basic living condition of this person.

Source

Published data on pension security benefits, sickness insurance and state social benefits is taken from the informative system of the Social Insurance Company and from the sector questionnaires of the Ministry of Labour, Social Affairs and Family of the SR.

Published data on social aid and establishments of social services is the results of the processing of the Statistical Office of the SR.

More information is given in half-year publication Selected Indicators of Social Welfare and in annual publications Selected Indicators of Social Welfare and Social Care Establishments or in above mentioned ministry and in the Social Insurance Company.

Methodological notes

Statistical data presented in the chapter refers to the network and activity of the state, municipal and private **cultural institutions**.

All kinds of professional theatres of the Ministry of Culture of the SR (including theatres for the youth and puppet ones) as well as the Theatre of the Academy of Performing Arts are included here for the period till the year 1996. Since 1997 the Theatre of the Academy of Performing Arts has been excluded.

Till 1996 museums had been including those administered by the Ministry of Culture of the SR and selected ones independent of the Ministry of Culture of the SR. Since 1997 all museums have been covered.

Up to 1997 data for galleries in total includes only state galleries and since 1998 there are included state, municipal and non-state galleries.

The term „Musical ensembles“ contains data on state musical ensembles and state ensembles of songs and dances.

The indicators „Radio broadcasting and TV broadcasting include the operators provided by law, i. e. public legal broadcasters (nation-wide broadcasting) and operators granted a licence i. e. private broadcasters, whose programmes are transmitted by terrestrial television channels or satellites.

Television broadcasting: The title „nation-wide broadcasting“ comprises the broadcasting covering the whole territory of the SR and the title „local broadcasting“ is the broadcasting for the territory smaller than the Slovak Republic.

The title „audio-visual works“ is new name for previous title „film production“.

Figures on religion show the denomination of the residing population based on the results of the Census of the Population and Housing that took place on March 3, 1991 as well as selected indicators on five most frequent churches obtained by questionnaire method.

Definitions

Broadcasted program presents all programs broadcasted through the own independent networks (including national broadcasting), local or outside production.

General news covers daily news and commentaries to main events, including sports news.

Loans to users includes the loans of all library units, i. e. books, periodicals, other documents and information sources to readers, i. e. without inter-library loan service.

Periodical publication is periodical press or another periodical issued at least two times per year with the same title, periodicity indication and standard layout for the publication.

The indicator „**number of titles**“ includes local publications if they are different from main publications, parts of newspapers sold separately, special publications, morning and evening papers with own name and registration, different language versions of the same periodical. There are not included local issued papers of the same papers, if they are not different from each other and parts of papers, if they are not sold separately.

The indicator „**circulation**“ also includes non-sold pieces.

Branch office of the museum refers to the detached parts of museum (including monuments belonging to museum), which are out-of the museum residence and create administrative entity with the museum.

Exposition is the whole installation placed in one building and opened for public.

Membership in civil associations, professional organizations, trade unions etc. is given in accordance with their rules.

Source

Source of data on culture is annual statistical survey in several sectors. The Ministry of Culture of the SR obtains data for theatres, musical ensembles, museums, galleries, audio-visual works, libraries (except university libraries), observatories, planetariums, astronomic cabinets, periodical press and churches. Zoological gardens data is reported by the Ministry of Environment of the SR. The Ministry of Education provides data on university libraries. Data on radio and TV broadcasting is surveyed by the Statistical Office of the SR.

Data on membership in civil associations was taken from central bodies of civil associations by questionnaire method.

More information can be obtained in annual publication Selected Indicators on Culture or in above mentioned ministries.

VI.6 Physical Culture

Methodological notes

Physical culture is both – an organized and non-organized individual, collective, club and other activity connected with physical training, sport, hiking and active recreation activity of people. This type of activity is carried out within the framework of the Slovak Association of Physical Culture and other civic associations.

Definition

First age category before adults includes sportsmen who have not reached the age in which they can attend races for adults category. Various sports have different age for the category of adults. In gymnastics it is the age of 16, in different sports it is varying up to 23 year of the age.

Source

Data is obtained from the statistical surveys of the Institute of Information and Prognoses of Education and administrative data taken from the Association of Physical Training Unions and Clubs of the SR as well as from the Association of Technical and Sporting Activities of the SR. Detailed data can be granted by organizations mentioned above.

VII.1 Crime-rate and Justice

Methodological notes

Data on criminality is surveyed in the framework of the Registration Statistical System of Criminality. There are registered announcements on a suspicion from commission of crimes, data on crimes and data on known perpetrators of criminal act. The statistical tables also contain the data registered by the Railway Police of the SR, the Office of Military Police of General Staff of the Army of the Slovak Republic and the General Directorate of Union for Prison and Justice Guards. Data on cases settled by courts and results of lawcourts proceedings is taken from the Ministry of Justice of the SR.

Definitions

Criminal offence is an act of a person or group of persons that intentionally or unconsciously offend against a law, rule or agreement.

Homicides is a criminal offence by which is certain person assassinated with another person.

Robbery is a criminal offence of perpetrator when he takes possession of the things owned to another person under the menace of immediate violence.

Battery is a criminal offence of perpetrator when he causes damage the health to another person with consequence of disability to work of this person in duration at least 7 days.

Violence criminality includes criminal offences: homicides, robbery, battery, blackmail, common coerce, burglary etc.

Moral criminality includes criminal offences relating to the laws on morality breaking: rape, sexual abuse, imperilling of morality, procuring, etc.

Economics criminality is specific kind of criminality causing economical damages to the country, organizations and to persons by breaking the laws, rules and habits of economic relations.

Cases is an indication of cases registered in particular register and being on the agenda at the courts. One case can involve more persons.

Criminal cases is cases being on the agenda at the courts on the basis of suit ceded to the courts by the prosecutor's office, within which the decisions on guilt, punishment, protective measures and compensation of damages caused by criminal activity are made.

Fill is total number of criminal cases that entered the courts during the calendar year, eventually cases registered again in particular register as a consequence of application of revisions. In civil cases and in care for minor children, fill represents the number of proposals recommended to the court to be dealt with and the courts register them into a particular register.

Defendant is a person against whom a legal action was brought to the court.

Settled is total number of cases completed in the course of the calendar year by legal decision on conviction, acquittal, abolition of the criminal prosecution or conveying to another body.

Unsettled is number of cases that were not completed legally for some reason in the course of the calendar year. These data are always referring to December 31 of given year.

The main part of **civil cases** consists of cases regulated by the Civil Code, Law on Family, Law on Land and Labour Code.

Sued person is a person sued for committing particular criminal offence. Accompanying the term „sued for committing a serious criminal offence„ there is the term used „**detaining**" or „**detention service**", which is directed in written by a prosecutor or a judge.

Convicted person is a person on whom a sentence was passed that came into force.

Sentenced to imprisonment without suspension – offenders sentenced to imprisonment in penitentiary institutions administered by the Ministry of Justice of the SR.

Suspended sentence is sentence to imprisonment that is suspended for 1 to 5 year's probation.

Banned professions is forbidden to operate in certain occupations, professions, functions or activities. The duration of this sentence had been limited to the period of 1 to 10 years. The sentence can be passed on convicted juveniles only in case if it does not prevent them from the preparation for their future profession.

Habitual offenders is person on whom the sentence was passed by the court taking into account his/her previous conviction as an exacerbating circumstance.

In addition to the duration of sentence to imprisonment without suspension according to the seriousness of the committed crime, the court imposes also the **reformatory and re-**

clamation group to convicts while serving their sentences. It is executed by the rule that the higher is the rank of the reformatory and reclamation group the smaller is the extent of rights of convicts and the larger is the extent of limitations.

Source

Statistical data source on criminality is administrative data of the Ministry of Interior of the SR. Data on justice is taken from basic materials of the Ministry of Justice of the SR.

More information is given in annual publication Selected Indicators on Criminality, Road Traffic Accidents and Fires or in above mentioned ministries.

VII.2 Accidents and Fires

Definitions

Killed persons are persons who died in the place of accident or in the place of fire, when being transported to hospital or by 24 hours after the accident.

Material loss is level of the arose loss set by the police on the basis of the values indicated by parties involved in the accident.

Direct material loss is sum of losses calculated from net book value of tangible fixed assets, materials and other means destroyed by the fire, estimated by firemen.

Rescued valuables is sum of values of tangible fixed assets and other valuables rescued from fire.

Source

Source of statistical data on fires is the Ministry of Interior of the SR and the Office of Fire Prevention.

The annual publication Selected Indicators on Criminality, Road Traffic Accidents and Fires or above mentioned institutions can provide you more information.

Methodological notes

According to the Law of the National Council of the SR No 221/1996 Collection on Territorial and Administrative Division of the SR, which came into force on July 24, 1996, regions broken up into districts have become the administrative units of the SR. The territory of the SR has been administratively divided into 8 regions and 79 districts.

This subchapter contains selected indicators by regions of the Slovak Republic.

Broader methodological description of indicators is given in the respective subchapters. This part only includes differences and deviations between processing methods or sets of statistical units and data or results, respectively, for the whole Slovak Republic.

Figures on **gross production, intermediate consumption and value added** are recalculated from the results of selected indicators of quarterly national accounts.

The results were compiled for the sample including incorporated organizations with one and more employees and for the sample of non-incorporated natural persons. Data on non-market services were calculated for regions on the basis of coefficients based on value of wage funds in respective branches. Data is preliminary, compiled according to the ESA 95 methodology and not consistent with data published in previous periods.

Marriages are classified in respect of the territory according to the last domicile of the bridegroom. **Divorces** are classified in respect of the territory according to the last common domicile of the married couple. In case that they did not live together it is classified according to the domicile of the divorce proposer.

Data on **emissions of basic pollutants** only refers to stationary pollution sources.

Gross turnover and number of employees in industry are processed by the so called „establishment method“. Reporting units are establishments with 20 and more employees. The number of employees represents the average registered number of employees of a current years.

Data of the indicator **„started dwellings“** show the number of building permissions issued. The indicator **„completed dwellings“** shows the number of dwellings that were approved for use. Number of **dwellings under construction** is the difference between these two indicators

regardless of viewpoint of time. Number of rooms in completed dwellings is given on the basis of approvals.

Data on **criminality** refers to the criminal offences ascertained by the police corps, they do not include the offences ascertained by the railway police, customs administration, prison and court guard and military police. All criminal offences are included only in summary data for the Slovak Republic in the subchapter Crime-rate and Justice (VII.1).

Definitions

Indicators definitions are given in the respective subchapters of this publication.

Source

This subchapter was prepared on the basis of the indicators processed in the territorial division from the sources of the Statistical Office of the SR. Only emissions of basic pollutants are taken from the Slovak Hydrometeorological Institute, land area is taken from the Office of Geodesy, Cartography and Cataster of the SR and data on criminality, accidents and fires from the Ministry of Interior of the SR.

More information by regions can be found in quarterly publication Selected Data on Regions and in annual publication Regional Comparisons.

VIII.2 Towns

Methodological notes

This subchapter contains selected data on towns of the Slovak Republic.

At present, there are 136 towns in the Slovak Republic. A municipality is declared a town by the National Council of the SR by a governmental proposal according to section 22, subsection 1 of Law No 369/90 Digest on the Municipal Constitution. The town seal, coat of arms, insignia and flag of a town are used by towns during municipal activities.

The reported population of some towns does not accord with the total increase/decrease of it. The differences result from territorial changes which are not included in the total increase/decrease of the population.

Data on geographic conditions and on the level of the civic and technical infrastructure of the towns is obtained in the framework of statistical subsystem of Towns and Municipal Statistics.

Data is surveyed for all municipalities and towns of the Slovak Republic. It is obtained by special statistical questionnaire and from non-sector databases. Data is updated as of Dec. 31, data on pre-primary establishments as of Sep. 31, data on primary and secondary schools as of Sep. 15, and data on universities as of Oct. 31. Data on houses, dwellings and cottages for individual recreation is taken from the Census as of March 3, 1991.

Reporting units are municipalities (in Bratislava and Košice – town parts), owners or administrators of water, sewage and gas supply systems.

Differences in area of some towns occurred due to shifts of parts of the local areas caused by the territorial changes.

Since January 1, 1999 the town Starý Smokovec has been renamed to Vysoké Tatry.

Definitions

Definitions of indicators are given in the respective subchapters of this publication.

Source

Published data for demography is the result of statistical surveys, other data is drawn up from database of Towns and Municipal Statistics. These sources provide more information for all municipalities of the Slovak Republic.

Methodological notes

The data are either taken from the publications below or are calculated by Statistical Office of the Slovak Republic from the data reported in the publications. Some data on the Slovak Republic have been obtained from the sources of the Statistical Office of the Slovak Republic. They are processed by the national methodologies, therefore the data are not fully comparable with data of other countries. The data published in some international statistical yearbooks are recalculated according to the methodology of a given international organization and therefore they are not always in compliance with the data published for the Slovak Republic by the Statistical Office of the Slovak Republic. Source of data is mentioned below the tables.

Names of countries are given in abbreviated, widely used forms that are not always in compliance with official full names of the countries.

UN Code is a three-digits numerical code created according to the rules set by the Statistical Office of the United Nations in New York. Used codes are assigned within the interval from 000 to 899 except the codes 896 and 898 that are reserved for special purposes. Acronyms are two-place and three-place alphabetic codes that are created for common purposes (two-place-acronym) as well as for special purposes (three-place-acronym). Valid codes and acronyms of countries are included in an international norm „ISO 3166-93“. Codes are updated by the Maintenance Agency in Berlin.

Data for 1998 are, in most cases, preliminary.

Unemployment rate is present by labour force sample survey (methodology of International Labour Organization, ILO).

Since 1990 The European Comparative Program (ECP) has granted comparable data in purchasing power standard on the Gross Domestic Product and on its parts of its application in threeyearly intervals for countries which took part in this program. The last course of comparison was realized in 1996.

Poznámky k Európe:

1) európska časť Turecka je zahrnutá do Ázie
2) rok 1997
3) bez Faerských ostrovov a Grónska
4) bez zámorských departmentov, a to Francúzska Guyana, Guadeloupe, Martinique a Réunion
5) vrátane ostrovov Gozo a Comino
6) rozloha 1,49 km^2
7) vrátane Azorských ostrovov a ostrova Madeira
8) bez Britských Normanských ostrovov a Isle of Man
9) s Baleármi a Kanárskymi ostrovmi a Alhucemas, Ceuta, Chafarinas, Melilla a Penon de Vélez de la Gomera
10) rozloha 0,44 km^2

Notes to Europe:

1) The European portion of Turkey is included in Asia
2) Year 1997
3) Excluding Faeroe Islands and Greenland
4) Excluding Overseas Departments, namely French Guiana, Guadeloupe, Martinique and Réunion
5) Including Gozo and Comino Islands
6) Surface area is 1,49 km^2
7) Including the Azores and Madeira Islands
8) Excluding Channel Islands and Isle of Man
9) Including the Balearic and Canary Islands and Alhucemas, Ceuta, Chafarinas, Melilla and Penon de Vélez de la Gomera
10) Surface area is 0,44 km^2

Poznámky k Ázii:

1) európska časť Turecka je zahrnutá do Ázie
2) rok 1997
3) bez Honkongu a Taivanu
4) vrátane časti Kašmíru-Džammu pod správou Indie, ktorého konečné postavenie nebolo ešte určené
5) vrátane Východného Timoru prezentovaného samostatne
6) vrátane údajov za východný Jeruzalem a izraelských usadlíkov v určitých územiach okupovaných Izraelom od júna 1967
7) zahrňuje Hokkaido, Honshu, Shikoku, Kyushu
8) bez údajov za Kašmír-Džammu , ktorého konečné postavenie nebolo ešte určenhé, Junagardh, Manavadar, Gilgit a Baltistan
9) zahrňuje 7 šejkátov-Abu Dhabi, Dubai, Sharjah, Ajaman, Umm al Qaiwain, Ras al Khaimah and Fujairah a územie, ktoré patrí Riyadhu po úprave hraníc v októbri 1955

Notes to Asia:

1) The European portion of Turkey is included in Asia
2) Year 1997
3) Excluding Hong Kong and Taiwan
4) Including data for the Indian held part of Jammu and Kashmir, the final status of which has not yet been determined
5) Figures provided by Indonesia including East Timor, shown separately
6) Including data for East Jerusalem and Israeli residents in certain other territories under occupation by Israeli military forces since June 1967
7) Comprising Hokkaido, Honshu, Shikoku, Kyushu
8) Excluding data for Jammu and Kashmir, the final status of which has not yet been determined, Junagardh, Manavadar, Gilgit and Baltistan
9) Comprising 7 sheikdoms of Abu Dhabi, Dubai, Sharjah, Ajaman, Umm al Qaiwain, Ras al Khaimah and Fujairah, and the area lying within the modified Riyadh line as announced in October 1955

Poznámky k Afrike:

1) rok 1997
2) vrátane enklávy Cabinda
3) bez Rodriguees a ostatných malých ostrovov
4) zahrňuje Bioko a Rio Muni

Notes to Afrika:

1) Year 1997
2) Including the enclave of Cabinda
3) Excluding Rodrigues and other small islands
4) Comprising Bioko and Rio Muni

Poznámky k Amerike:

1) Havai, štát USA je zahrnutý do Ameriky
2) rok 1997
3) bez indiánskeho obyvateľstva žijúceho v džungli
4) bez kočovných indiánskych kmeňov
5) vrátane Carriacou a iných závislých území v Grenadských ostrovoch
6) vrátane Bequia a ostatných Grenadských ostrovov

Notes to America:

1) Hawaii, a state of the U.S.A., is included in America
2) Year 1997
3) Excluding Indian jungle population
4) Excluding nomadic Indian tribes
5) Including Carriacou and other dependencies in the Grenadines
6) Including Bequia and other islands in the Grenadines

Poznámky k Oceánii a Svetu:

1) rok 1997
2) vrátane Vianočného ostrova a ostrovov Fanning, Ocean, Washington
3) vrátane Campbellových a Kermadceových ostrovov a neobývaných ostrovov Antipodes, Aucklad, Bounty, Snares, Solander, Tree Kings
4) zahrňuje východnú časť Novej Guinei, Bismarckovo súostrovie, Bougainville a Buka zo Šalamúnových ostrovov a asi 600 menších ostrovov
5) zahrňuje Šalamúnove ostrovy (okrem Bougainville a Buka), vrátane ostrovov Ontog, Jáva, Rennel a Santa Cruz

Notes to Oceania and World:

1) Year 1997
2) Including Christmas, Fanning, Ocean, Washington Islands
3) Including Campbell and Kermadec Islands as well as Antipodes, Auckland, Bounty, Snares, Solander and Tree Kings island, all of which are uninhabited
4) Comprising eastern part of New Guinea, the Bismarck Archipelago, Bougainville and Buka of Solomon Islands group and about 600 smaller islands
5) Comprising the Solomon Islands group (except Bougainville and Buka), Ontong, Java, Rennel and Santa Cruz Islands.

IX.2 International Associations

Methodological notes

The Central European Free Trade Agreement (CEFTA) was signed on 21st December 1992 in Krakow. The original signatories of the Agreement was the Czech Republic, Hungary, Poland and the Slovak Republic. The following countries became members through accession: the Republic of Slovenia (January 1, 1996), Romania (July 1, 1997), Bulgaria (January 1, 1999).

Source

The data are taken from the common quarterly publication of the Central European Association for the Co-operation in Statistics „CESTAT Statistical Bulletin (4/99 and 1/00)“. Some of the data were preliminary at the moment of their publishing. Therefore they might have been corrected.
